

**Goodness portion of the present thesis is dedicated
to my parents and the entire teaching staffs**

ACKNOWLEDGMENTS

I would like to express my deepest gratitude and sincere appreciation to the many people. Without their help and assistance this dissertation could not have materialized. First of all, I would like to thank my spiritual master who gives me the knowledge and the greatest experience of life. I still walk in this world under his bless. I also receive guidance, valuable suggestion, supervision, understanding, encouragement and helpfulness throughout my study, especially during the preparation of this thesis and the defense examination from Associate Professor Dr. Jintanaporn Wattanathorn and Assistant Professor Dr. Supaporn Muchimapura, my advisor and my co-advisor and others who walk beside me.

I am grateful to member of Neurosciences program and member of Integrative Complimentary Alternative Medicine Research and Development Center, my friends and the family of my advisor and my co-advisor for their kindness to provide some of the most essential techniques helpfulness and encouragement. I am grateful to my experimental animals that devoted their lives to provide me a successful experiment.

Finally, I would like to recognize to my parents and my brother for their love, care, helpfulness, support, encouragement throughout my life and patience with me as I have pursued my dreams. I hope that this thesis can give back a portion of what you all have given me. Because of all of you, I am blessed.

This work was supported by the Graduate research scholarship from National Research Council of Thailand (NRCT), the National Nanotechnology Center (NANOTEC), NSTDA, Ministry of Science and Technology, Thailand, Graduate School, Khon Kaen University, Integrative Complementary Alternative Medicine Research and Development Center and faculty of Medicine, Khon Kaen University.
