Appendix A

Questionnaire for study of some factors affecting reduction of mandarin cultivated orchards in Mae Soon sub district

Objective : This questionnaire is used in order to study of the farmer practices for mandarin orchard management in Mae Soon sub district with the aim to clearly identify the factors affecting productivity declination of the mandarin trees. The hypothesis is that the problem in each area will be different according to the differences among the mandarin cultivated areas. Once the real problem is identified the suitable problem solving can be applied. The information obtained from this study will be useful for the farmers who want to cultivate mandarin trees in the new area for planning of cultivation schedule in advance.

The questionnaire consists of 4 parts.

Part 1 General information of the farmer who fill up the questionnaire.

Part 2 General information about the orchard.

Part 3 Orchard management information.

Part 4 Evaluation of the orchard status.

Part 5 The test : How do you manage the soil in the orchard?

Please kindly answer the questionnaire according the real fact. The data obtained will be kept secretly and used for research only. Thank you for your kind cooperation in answering the questions and providing your useful opinion.

Miss Vassana Viroonrat

Mobile phone 084-8049247

1) General information of the farmer

- 1.1 First name.....Family name.....
- 1.2 Address.....Moo.....Sub-district.....
- 1.3 Telephone no.
- 1.4 Age.....year
- 1.5 Level of highest education.....Specialized field.....
- 1.6 Major career Mandarin orchard
- Others.....

2) Information about mandarin orchard

- 2.1 Location of the orchard
- Mu.....Mae Soon sub district
- Mu.....Sub-district.....District.....
- 2.2 Age of mandarin trees.....year.
- 2.3 Orchard history
- Used to be litchi orchard New area Paddy field
- Other crops specified.....
- 2.4 Total area.....rais Total no. of mandarin trees.....trees
- If you have more than orchard please provide the details for the other orchards
- Second orchard area.....rais, Total no. of tree.....trees
- Third orchard area.....rais, Total no. of tree.....trees
- 2.5 Location of the orchard
- Unwounded by mandarin orchards
- The orchard nearby is still productive
- Abandon orchard
- The orchard is far away from the major mandarin cultivated area and it is close to the forest or the area cultivated with the other crops

2.6 Topographic condition of the orchard

Highland Foothill

Paddy field

2.7 Land preparation of the orchard Bedding No bedding

2.8 mostly used planting material

Grafting

cv. troyer cv. cleopata

Air layering

Other.....

2.9 Availability of water used in the orchard

Sufficient all year second

Insufficient solving problem by.....

2.10 Normal irrigation schedule

Once a day for a period of.....hr.

Twice a week each for.....hr.

Once a week for a period ofhr.

..... a week each forhr.

2.11 Source of irrigated water for the orchard

Huoy Nam Uoon Huoy Nam Dung

Mae Soon river Others.....

2.12 Methods of irrigation in the orchard

High pressure sprinkle pressurelb/in

Mini sprinkle pressure lb/in

Rain fed Sun face irrigation

Others.....

2.13 Type of soil in the orchard

- Clayey Loam Sandy Other

3) *Soil management in the orchard.*

3.1 Have you ever check soil quality of your orchard?

- Yes No

3.2 Fertilizer usage in your orchard

- Only chemical fertilizers Only organic fertilizers

- Both element and organic fertilizers

3.3 Application of manure or compost in the orchard

- No application because.....

- Application at approximatelykg/tree

- Seldom Every other year Every year.....times/year

3.4 Do you use mulching under the tree canopy?

- Yes because.....

- No because.....

3.5 Criteria use for fertilizer application in your orchard

- Experience

- Recommendation by dealer of fertilizer distributer

- Text book, Agricultural Journal

- Information from the experienced farmers or adjacent orchard

- The result of soil testing Others

3.6 Fertilizer grade which you used regularly can be answers more than 1 item

- 46-0-0 15-15-15 13-13-21

- 0-46-0 0-0-60 15-0-0

- 0-52-34 Other grades.....

4.2 Cause of orchard failure (can answer more than one item)

- No skill to produce mandarin Insufficient of water
 Root rot Greening disease
 Limit of fertilizer application Other.....

4.3 approximate fruit yield

Yield (period)	No : of basket (3kg/basket)		
	2010	2009	2008
In season fruit yield (Dec-Jan)			
1 st off season fruit yield (Feb)			
2 nd off season fruit yield (Mar)			
3 rd off season fruit yield (July-Aug)			

4.4 In 2010 was there any problem on immature fruit with the red point symptom?

- Yes approximately.....% of the total yield
 No

4.5 Do you have the unhealthy mandarin trees in your orchard?

- Yes distribution pattern of unhealthy trees in the orchard
 - Border (adjacent to deteriorating orchard)
 - Spreading from the central area of the orchard
 - Patchy distribution throughout the whole area
 - Other pattern No

4.6 If your orchard is collapsed what is your plan for the next career?

- Mandarin cultivation
- Agriculture but changing the crop by expecting to grow.....
- Change the career to.....
- Do not know what to do

4.7 previous situation of your mandarin production

- Gained profit in the year
- Lost profit in the year.....
- Zero gain
- No information

5) *The test "How do you manage the soil in your orchard ?"*

Concept : check only one correct answer

5.1 Concept for fertilizer application to mandarin trees

- Based on available input cost
- Use high dose in order to get more fruit yield
- Based on the requirement of the trees
- Follow the information labeled on fertilizer bag

5.2 How is your ideal soil for mandarin cultivation?

- Sandy soil with very good drainage
- Clayey soil with very good water holding capacity
- Loamy soil with good drainage
- Lateritic gravel soil with rapid water percolation

5.3 Which item is not the usefulness of manure/compost?

- Soil aggregate formation resulting in better soil structure
- Soil microbial food
- Improving the growth of root system resulting in healthy root
- Increasing of plant nutrients and can be used as the alternative source of chemical fertilizer

5.4 If your soil is strong acidic how do you apply lime to get the highest effectiveness?

- Mixing lime with chemical fertilizer and then immediately broadcast into the soil
- Mixing lime with compost or manure, then thoroughly mix into the soil following with irrigation
- Patchy application of lime on the soil surface
- Apply urea fertilizer and then broadcast lime on top – urea fertilizer

5.5 What is the suitable pH of water used for mixing with insecticides or foliar fertilizer?

- Do not know this information before
- I know the suitable pH but cannot know how to the problem
- I know and I will use commercial acetic acid to acidity water high pH
- I know if the water is acidic the pH should be adjusted to neutral

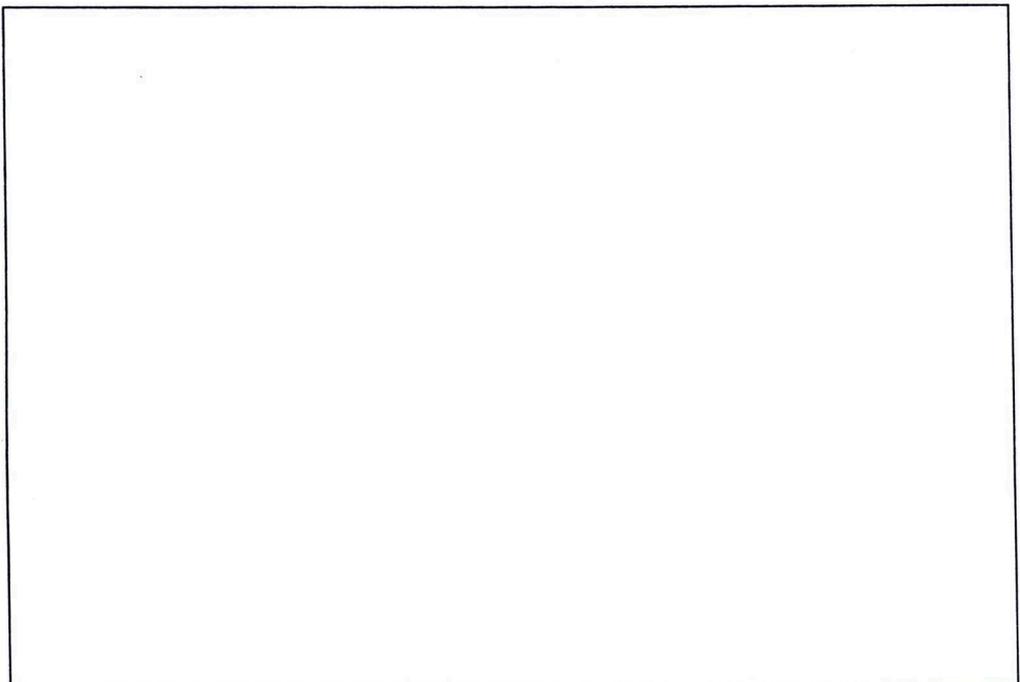

5.6 Criteria that you use insecticide spraying

- Spraying according to spraying schedule (every 3 days/every 7 days/every 10 days)
- Randomly check the number of insect pest. Use insecticide spraying if 1-3 insect pests were found.
- Spraying when insect damage was found
- Consider climatic condition and environment before spraying and use insecticide spraying when 1-5 insect pests were found

5.7 The most dangerous disease in your orchard

- Canker
- Root rot
- Fungal disease at the point of the fruits
- Greening disease

Please draw roughly the map of your orchard

Appendix B

Table Appendix 1 Soil properties of soil series

soil series	name series	soil group	soil texture	level soil	Horizon A			drainage	runoff	permeability	soil depth (cm)
					%sand	%silt	%clay

Curriculum Vitae

Name Miss.Vassana Viroonrat

Date of birth March, 09, 1981

Academic background 1999-2002 B.S. (Agronomy), Chiang Mai
University, Chiang Mai, Thailand

2004-2007 M.S. (Soil Science), Chiang Mai
University, Chiang Mai, Thailand
