### **ABSTRACT**

This research aims to 1) studying the administration applying principles of good governance of sub-district administrative organizations in Lopburi province and 2) comparing the administration applying the principles of good governance of sub-district administrative organizations in Lop Buri province regarding gender, age, educational degree, marital status, occupation, average income per month, and the length of time of habitation in the area. The representative samples of the study are 400 of population in the area under the governance of the sub-district administrative organizations in Lop Buri province. The reliance of questionnaires is 0.890. The research instrument is a software which is used to analyse the data. The statistics employed to analyse the data are percentage, means, standard deviations, t-test, one-way ANOVA (analysis of variance) and Fisher's LSD test.

The findings showed that:

1. According to the overview of the administration applying principles of good governance of sub-district administrative organizations in Lop Buri province, it is found that the rate of opinions towards the overview is high which can be classified from high to low as rules of law, principles of morality, principles of responsibility, principles of rewarding, principles of accountability and the least is public participation.

2. The comparison of the administration applying the principles of good governance of sub-district administrative organizations in Lop Buri reveals no difference of the statistical significance when classifying the data by gender educational degree, marital status, occupation, average income per month and the length of time of habitation in the area while it is found the differences at the level of statistical significance of .05 when classifying the data by age.
