List of Figures

Figure 2.1	A schematic diagram of an optical setup for implementing the FTP-based profilometry by using the wavelet filters	3
Figure 2.2	Power spectrum of a 1D signal scanned from a typical grating pattern deformed by 3D object	4
Figure 2.3	(a) First- and (b) second-order derivatives of the Gaussian functions, respectively	6
Figure 2.4	Frequency responses of (a) the first- and (b) the second-order derivatives of the Gaussian functions, respectively	8
Figure 2.5	Frequency localization of the deformed grating pattern by using (a) the first- and (b) the second-order derivatives of the Gaussian functions, respectively	9
Figure 3.1	An experimental setup for implementing the FTP-based profilometry	11
Figure 3.2	An isosceles triangular prism object	12
Figure 4.1	Grating images deformed by (a) the isosceles triangle prism object and (b) the reference plane. Intensities scanned at the row 100 th of the grating images shown in (c) Fig. a and (d) Fig. b, respectively	13
Figure 4.2	Height reconstructions of the prism generated by using the conventional FTP and the first-order derivative of the Gaussian function	14
Figure 4.3	Height reconstructions of the prism generated by using the conventional FTP and the second-order derivative of the Gaussian function	15
