Studies, Mahidol University

## ACKNOWLEDGEMENTS

The thesis was completed with guidance, suggestion and great help from Asst. Prof. Piyakarn Tearthisup, my thesis advisor. Not only the teaching in academic and research, she has also shared me her suggestions for lifestyle and trained me to have a better understanding, more strength and perseverance. She has always been showing me her mercy and patience. I also would like to thank Dr. Narin Boontanon, my thesis co-advisor and Assoc. Prof. Apisak Poopan, for their useful implication in a great deal.

I would like to express my gratitude to the heads of Lumpini park and Vachirabenjatas park for their support with the permission to access their data. A special thank goes to the head of agricultural division of these park: Mr. Somsak Inthamat and Mr. Sinthorn Singkaew for their given knowledge, suggestion and help in data collection. Moreover, I thank the security staffs for providing the convenience in the data collection.

My gratitude goes to Asst. Prof. Somchai Anusonpornpeam, the department head of soil science, faculty of agriculture, Kasetsart university, for the permission to use the instruments and tools in analyzing the total nitrogen in soil and Mr. Chaipatra Khongkaew, the research scientist, for his instruction in the procedure of the analysis and his generous help throughout the project.

Moreover, I would like to thank my colleagues from faculty of environment and resource studies, Mahidol university, for their assistance in data collection and analytic investigation.

Last but not least, I am grateful for my family especially my parents who has been supporting me with their understanding, encouragement and finance. Without them this thesis could not be complete.

This thesis was financially supported with graduate research fund (2556 B.E.) given by National Research Council of Thailand.

Arisa Sadit
