ABSTRACT (IN THAI)	i
ABSTRACT (IN ENGLISH)	iv
DEDICATION	vii
ACKNOWLEDGEMENTS	viii
LIST OF TABLES	xii
LIST OF FIGURES	xv
CHAPTER I INTRODUCTION	1
1.1 Rationale and Background	1
1.2 Thesis Objectives	3
1.3 Research Plan	3
1.4 Thesis Structure	5
1.5 Research Sites	5
1.6 Research Funds	6
CHAPTER II LITERATURE REVIEW	7
2.1 Bio-refinery	7
2.2 Sugarcane	8
2.3 Hydrogen Properties and Its Use	9
2.4 Hydrogen Production	12
2.5 Hydrogen production from lignocelluloses material	32
2.6 Continuous Stirred Tank Reactors (CSTR) for Bio-hydrogen Production	37
2.7 Recovery of Hydrogenogenic Effluent for Production of Fuels	38
2.8 Microbial Community of Bio-hydrogen Producer	42
2.9 Response Surface Methodology (RSM) and Central Composition Design (CCD)	44

TABLE OF CONTENTS (Cont.)

	Page
CHAPTER III BIO-HYDROGEN PRODUCTION FROM SUGARCANE JUICE BY IMMOBILIZED <i>Clostridium butyricum</i> ON SUGARCANE BAGASSE	51
3.1 Introduction	51
3.2 Materials and Methods	52
3.3 Results and Discussion	58
3.4 Conclusions	72
CHAPTER IV TWO STAGES FERMENTATION OF BIO-HYDROGEN AND ETHANOL BY <i>Clostridium butyricum</i> FROM SUGARCANE JUICE	77
4.1 Introduction	77
4.2 Materials and Methods	79
4.3 Results and Discussion	84
4.4 Conclusion	98
CHAPTER V BIO-HYDROGEN PRODUCTION FROM THE FERMENTATION OF SUGARCANE BAGASSE HYDROLYSATE BY <i>Clostridium butyricum</i>	103
5.1 Introduction	103
5.2 Materials and Methods	103
5.3 Results and Discussion	107
5.4 Conclusions	120
CHAPTER VI OPTIMIZATION OF PROCESS PARAMETERS ON METHANE PRODUCTION FROM HYDROGENOGENIC EFFLUENT BY RESPONSE SURFACE METHODOLOGY	125
6.1 Introduction	125
6.2 Materials and Methods	127
6.3 Results and Discussion	131
6.4 Conclusions	138

TABLE OF CONTENTS (Cont.)

	Page
CHAPTER VII CONCLUSIONS AND RECOMMENDATIONS	143
7.1 Conclusions	143
7.2 Recommendation	146
REFERENCES	147
APPENDICES	173
APPENDIX A RAW DATA OF CHAPTER 4	175
APPENDIX B ANALYTICAL METHODS	179
APPENDIX C LIST OF PUBLICATIONS, PROCEEDINGS AND ABSTRACTS	193
VITAE	237

LIST OF TABLES

	Page
Table 1 The physical properties of hydrogen	10
Table 2 Hydrogen-evolving microorganisms	15
Table 3 Fermentative hydrogen production by pure culture	22
Table 4 Comparison of hydrogen yield by various types of microorganism when sugar was used as a carbon source	23
Table 5 Various pretreatment methods for enriching hydrogen-producing bacteria from mixed culture inoculum in batch hydrogen fermentation	24
Table 6 The comparative properties of nitrogenase and hydrogenase	27
Table 7 Hydrogen production by hydrogen-producing bacteria with different substrates	29
Table 8 Effects of nitrogen concentration on batch fermentative hydrogen production	30
Table 9 Effects of C/N and C/P on batch fermentative hydrogen production	30
Table 10 Effects of initial pH on batch fermentative hydrogen production	32
Table 11 Effects of temperature on batch fermentative hydrogen production	33
Table 12 Comparison of sugar compositions and inhibitor concentration obtained from different acid hydrolysis conditions of SCB.	34
Table 13 Hydrogen production from hydrolysate lignocelluloses	37
Table 14 CSTR used for biohydrogen production	39
Table 15 Factors affecting methane production	40
Table 16 Comparison of ethanol production by various types of microorganisms with different substrate under anaerobic condition	42
Table 17 Experimental matrices for central composite designs: (a) two variables and (b) three variables	46
Table 18 Optimization factors for biogas production using Response Surface Methodology (RSM)	50
Table 19 Compositions of sugarcane juice	52

LIST OF TABLES (Cont.)

	Page
Table 20 Hydrogen production performance from sugarcane juice by free and immobilized cells of <i>C. butyricum</i> under different initial	59
Table 21 Soluble metabolites distribution by free and immobilized cells of <i>C. butyricum</i> at each initial pH and initial sucrose	61
Table 22 Hydrogen and soluble metabolites production from sugarcane juice by the immobilized <i>C. butyricum</i> in repeated batch operation	68
Table 23 Comparison of hydrogen yield from sugar by various types of microorganisms	69
Table 24 Characteristics of hydrogenogenic effluent	81
Table 25 Experiment data under steady-state condition in continuous hydrogen fermentation at each HRT	87
Table 26 Hydrogen yield (HY) values in the literature search	87
Table 27 Summary of DGGE analysis results for microbial community from hydrogen production system at different HRT	89
Table 28 Metabolic products in fermentative broth from ethanol production at different initial pH	94
Table 29 Metabolic products in the fermentative broth of ethanol production at different initial sugar concentrations	96
Table 30 Comparison of ethanol production by various types of microorganism with sugar-type substrate.	96
Table 31 Compositions of the SCB hydrolysate obtained at a fixed reaction time of 60 min under different percentage of H ₂ SO ₄	110
Table 32 Compositions of SCB hydrolysate obtained at a fixed H ₂ SO ₄ of 0.5% under different reaction time	111
Table 33 Comparison of sugar compositions and inhibitor concentration obtained from different acid hydrolysis conditions of sugarcane bagasse	112

LIST OF TABLES (Cont.)

	Page
Table 34 Hydrogen production performance by <i>C. butyricum</i> for each initial pH at a fixed initial total sugar concentration of 20 g-COD/L of SCB hydrolysate	114
Table 35 Soluble metabolites distribute during hydrogen production by <i>C. butyricum</i> for each initial pH at a fixed initial total sugar concentration of 20 g-COD/L of SCB hydrolysate	114
Table 36 Hydrogen production performance by <i>C. butyricum</i> for each initial total sugar concentration of SCB hydrolysate at a fixed initial pH of 5.5	118
Table 37 Soluble metabolites distribution during hydrogen production by <i>C. butyricum</i> for each initial total sugar concentration of SCB hydrolysate at a fixed initial pH of 5.5	119
Table 38 Comparison of hydrogen yield in various types of sugar by different <i>Clostridium</i> species	119
Table 39 Characteristics of hydrogenogenic effluent	127
Table 40 Experimental range and levels of the independent variables	128
Table 41 Full factorial CCD matrix of substrate concentration, ratio of NaHCO ₃ to substrate and initial pH of substrate in coded and real values on MY	130
Table 42 Analysis of variance for quadratic polynomial model	132
Table 43 Predicted and measured values of the confirmation experiments	138
Table 44 The performance of using sugarcane as a feed stock to produce Multibiofuels	146
Table 45 Biogas and hydrogen production during ethanol fermentation	177

LIST OF FIGURES

		Page
Figure 1	Flow diagram of the experiments on multi-biofuels production from sugarcane by <i>C. butyricum</i> and anaerobic mixed-culture	4
Figure 2	Integrated biorefinery showing example bioprocesses of monoclonal antibody and ethanol production	8
Figure 3	Schematic working of Fuel cell	11
Figure 4	<i>Clostridium butyricum</i> morphology	20
Figure 5	Biochemical pathway in <i>Clostridium butyricum</i>	21
Figure 6	Continuous stirred tank reactor	37
Figure 7	Anaerobic digestion process	41
Figure 8	Central composite designs for the optimization of: (a) two variables ($\alpha = 1.41$) and (b) three variables ($\alpha = 1.68$) (●) Points of factorial design, (○) axial points and (□) central point	45
Figure 9	Photograph of biohydrogen producing system connected to fuel cell unit: Δ = Fermenter controller, \blacksquare = Bio-reactor for fermentative hydrogen production, \blacksquare = CO ₂ absorber, \blacklozenge = Hydrogen storage, \bullet = fuel cell, \blacktriangle = Fan and \odot = Digital multi-meter	56
Figure 10	Hydrogen production rate (HPR, mL H ₂ /L substrate.day) and hydrogen yield (HY, mol H ₂ /mol sucrose consumed) by the immobilized <i>C. butyricum</i> at each reusability runs.	64
Figure 11	Scanning electron microscope studies of sugarcane bagasse (SCB) as a support material, 50X, (a); <i>C. butyricum</i> immobilized on SCB, 3,500X, (b); and immobilized <i>C. butyricum</i> on SCB after 5 repeated runs of continuous hydrogen fermentation processes, 3,500X, (c).	64
Figure 12	Time course profile of cumulative hydrogen production and sucrose concentration remaining at 25% end-of-the-batch harvested volume.	65
Figure 13	Time course profile of cumulative hydrogen production and sucrose concentration remaining at 50% end-of-the-batch harvested volume.	66

LIST OF FIGURES (Cont.)

		Page
Figure 14	Time course profile of cumulative hydrogen production and sucrose concentration remaining at 75% end-of-the-batch harvested volume.	66
Figure 15	Time course profile of electricity generation and hydrogen production using fuel cell system.	70
Figure 16	Feasibility analysis of hydrogen production from sugarcane juice for electricity generation.	71
Figure 17	Schematic diagram of the CSTR (not subject to scale)	80
Figure 18	Operating parameters for hydrogen production from sugarcane juice in the CSTR augmented with <i>C. butyricum</i> under non-sterile condition.	86
Figure 19	DGGE analysis of microbial community in hydrogen production at different HRT. M1, M2 = Markers	89
Figure 20	ORP variation, biomass and metabolic production during the CSTR operation.	91
Figure 21	Effect of initial pH on ethanol production, ethanol yield, specific ethanol Production rate and biomass concentration from hydrogenogenic effluent by carried over microorganism at the end of ethanol fermentation.	93
Figure 22	Effect of initial sucrose concentration on ethanol production, ethanol yield, specific ethanol production and biomass from hydrogenogenic effluent by carried over microorganisms at the end of ethanol fermentation.	95
Figure 23	DGGE analysis for microbial community responsible for ethanol production at different initial pH; 1=pH 5, 2= pH 6, 3=pH 7 and 4= pH 8 and at different sucrose concentration; 5 = 25 g-COD/L, 6= 50 g-COD/L, 7 = 100 g-COD/L and M = Marker.	97

LIST OF FIGURES (Cont.)
