There are a lot of dietary supplement products registered in Thailand. Both pharmacists and consumers are asking for advice concerning supplements. The objective of this study was to develop "Thai-multimedia computer assisted instruction in dietary supplement products registered in Thailand" software to help pharmacists and consumers get the correct advice.

This software had been written in Asymetric Toolbook II Instructor (Toolbook version 5.0). It covers 38 dietary supplement products following the definition of dietary supplement product by the Food and Drug Administration (Thai-FDA).

The finished software was evaluated by 20 users using a questionnaire. Satisfaction scores according to context completeness, increased knowledge, visual and audio performance, entertainment, and user friendliness were 77.71%, 81.14%, 72.14%, 72.14% and 76.43% respectively.

It can be concluded that the developed software can provide desirable knowledge for users. However, to make the computer program more attractive, additional multimedia is needed.
