### **ABSTRACT**

Two main objects of the study entitled "Warehouse Management System for Meiko Trans (Thailand) Co., Ltd." are as follows : Firstly, to design and develop the application for warehouse management system. Program on client/server. Secondly, to analysis and develop database for warehouse management.

The procedure is problem collecting, existing management system studying and user demands. To develop the inventory management system is using Visual Basic for Application Client/Server and Interbase Firebird's database. This system is inventory stock collecting, inventory management and ordering for customer lists, by using barcode system for data entry.

Actually system, installation database program at server with Windows2000 and installation inventory management system at 5 clients with WindowsXP. For 10 users evaluated that system is friendly-user and satisfied, reduce procedure and increasing potentially. This research will be more useful and developing for industrial inventory management system.
