ABSTRACT

The purposes of this independent study “Intranet Human Resource Information System of the Faculty of Medicine, Chiang Mai University” are 1) to collect, analyze and create human resource database of Faculty of Medicine, Chiang Mai University 2) to develop human resource information systems retrieved from central database and to be used within the intranet system of Faculty of Medicine, Chiang Mai University 3) to study problems, obstacles, limitations and problem solving methods for information system development and effectively use of intranet human resource information system

Intranet Human Resource Information System of the Faculty of Medicine, Chiang Mai University was developed on Windows Millenium operating system. The system was developed using JavaServer Pages and created relational database by MySQL program.

The result of this study was evaluated from actual used at Personal Division and Policy and Planning Division from 100 data records and 22 questionnaires assessment.

The result showed that the average of efficiency level in actual used of system was 4.17. We concluded that the system was accurate, productive and convenient. The developing program was satisfied and suitable for being used in intranet human resource information system and supported the objective of this study.
