ABSTRACT

The study was descriptive research. The purpose of this study was to determine self-disciplined aspects in undergraduate students of Siam University. The self-disciplined aspects composed of responsibility, self-confidence, leadership, patience, honesty, sacrifice and reserving one's attitude. The subjects were 531 undergraduate students of Siam University that were required from stratified random sampling. The instrument was the self-disciplined aspects questionnaire of undergraduate students that had interrater reliability of 0.89. Data was analyzed by t-test, F-test, and

Major finding were as follows:

1) The undergraduate students of Siam University have had the high level of self-disciplined aspects. Considering each an aspect has found that they had the high level in leadership, responsibility, patience, honesty, sacrifice and reserving one's attitude but they had the moderate level of self-confidence.

2) The mean score of self-disciplined aspects of the female group were significantly higher than the male group at the .05 level.

3) The self-disciplined aspects were significantly different at the .05 level in the difference of grade, the strict-disciplined of instructors on student and admonishment of parents.

Keywords: self-disciplined aspects, undergraduate students
