

ACKNOWLEDGEMENT

I would like to express my gratitude to my mentor Professor Suthat Fucharoen for his guidance and suggestion which have enabled me to carry out the studies successfully. I am also very grateful to Professor Kovit Pattanapanyasat for his kindly care advices and constructive supervisions. I am grateful to Mr. Sakkarin Ardsiri and Miss Thunwarat Suriyan, the graduate student at Mahidol University, for their valuable contributions.

I am extremely grateful for the forbearance of many study participants who have volunteer and allowed me to study their provided samples. I am indebted to numerous colleagues for generously contributing information on the clinical course and treatment histories of the patients.

This study could not have done without help and support from the Thalassemia Research Center, Institute of Molecular Biosciences and the Center of Excellence for Flow Cytometry, Division of Instruments for Research, Office for Research and Development, Faculty of Medicine Siriraj Hospital, Mahidol University. My appreciations are extended to all staff for their contributions and discussion.

I acknowledge the granting support of the Thailand Research Fund, the Office of the Higher Education Commission, and Mahidol University, Thailand.
