### ABSTRACT

The independent study entitled” Development of an Inventory Database System for Executives at the Parawood 1993 Company Limited ” is aim to develop a Database that can manage all inventory information for a Company Manufacturing and exporting wood products.

In this study, the system was developed by using the Microsoft Windows XP as operating system, Professional Home Page (PHP) as the software development tool and MySQL as database software tool. This system is also developed for using through network system.

The result of the study was the development of a relational database for handling inventory information which can connect with other information and be able to produce new information over a network. In future this system may be further developed such that it can be accessed via the worldwide web. The completed information system meets the requirements, and the project can be considered successful.
