มาตรฐาน ISO 3046 ที่เกี่ยวข้องกับการทดสอบเครื่องยนต์

มาตรฐาน ISO 3046 ที่เกี่ยวข้องกับการทดสอบเครื่องยนต์ [26]

International Combustion Engines - Performance

Part 1 - Engines for land, rail-traction and marine use - Standard reference conditions and declamations of power, fuel consumption and lubricating oil consumption

n.1 Scope

This report of ISO 3046 specifies the standard reference conditions and the methods of declaring of power, fuel consumption and lubricating oil consumption for reciprocating internal combustion engines using liquid or gaseous for particular engine applications.

n.2 Field of application

This part of ISO 3046 covers reciprocating internal combustion engines for land, rail-traction and marine use, excluding engines to propel agricultural tractors, road vehicles and aircraft.

This part of ISO 3046 may be applied to engines used to proper road construction and earth-moving machines, industrial trucks and for other applications where no suitable International Standard for these engines exist.

n.3 References

ISO1000, SI units and recommendation for the use of their multiples and of certain other units.

ISO 1204, Reciprocating internal combustion engines - Designation of the direction of rotation.

ISO 1205, Reciprocating internal combustion engines - Designation of the direction of cylinders.

ISO 1585, Road vehicles - Engine test code - Net power.

ISO 2534, Road vehicles - Engine test code - Gross power.

ISO 2710, Reciprocating internal combustion engines - General definitions.

ISO 3046/2, Reciprocating internal combustion engines - Performance - Part 2 : Engine tests.

ISO 3046/4, Reciprocating internal combustion engines - Performance - Part 4 : Speed governing.

ISO 3046/6, Reciprocating internal combustion engines - Performance - Part 6 : Overspeed protection

n.4 Units and terms

n.4.1 The units used are those of the International System of Units (SI Unit) described in ISO 1000.

n.4.2 The general engine terms used are as defined in ISO 2710.

n.5 Standard reference conditions

For the purpose of determining the power and fuel consumption of engines, the following standard reference conditions shall be used :

Total barometric pressure :

$$P_r = 100 \text{ kPa}$$

Air temperature :

$$T_r = 300 \text{ K} (27^\circ\text{C})$$

Relative humidity :

$$\phi_r = 60 \%$$

Charge air coolant temperature :

$$T_{cr} = 300 \text{ K} (27^\circ\text{C})$$

If other reference conditions are chosen, these shall be stated.

NOTES

1. Relative humidity of 60% corresponds to a water vapor pressure of 2,133 kPa (16 mmHg) at a temperature of 300 K.
2. The air density at the standard reference conditions is equivalent to that at 98 kPa (376 mmHg) and 20 °C and to that at 101 kPa (760 mmHg) and 30 °C
3. For automotive type inboard and outboard marine propulsion engines, the standard reference conditions in ISO 1585 and ISO 2534 may be applied but they shall be stated.

n.6. Auxiliaries

n.6.1 Introduction

In order to show alertly the conditions under which a power is determined, it is necessary to distinguish those auxiliaries which affect the final shaft output of the engine and also those which are necessary for the continuous or repeated use of the engine.

Items of equipment fixed to the engine and without which the engine could not in any circumstance operate at its declared power are considered to be engine components and are not therefore, classed as auxiliaries.

(Such as fuel injection pump, exhaust turbocharger and charge air cooler are in this category of engine components.)

n.6.2 dependent auxiliary : Item of equipment, the presence or absence of which affects the final shaft output of the engine.

n.6.3 independent auxiliary : Item of equipment which uses power supplied from a source other than the engine.

n.6.4 essential auxiliary : Item of equipment which is essential for the continued or repeated operation of the engine.

n.6.5 non-essential auxiliary : Item of equipment which is not essential for the continued or repeated operation of the engine.

n.7 Declarations of power

n.7.1 Introduction

n.7.1.1 Purpose of statement of power

Statements of power are required for two main purposes :

- a) the declaration by a manufacturer of the value of the power which his engine will deliver under a given set of circumstances. This declared value is known as the "rated power".

b) the verification by measurement that the engine delivers the power which has been declared in a), under the same set of circumstances or after proper allowance has been made for any difference in circumstance.

To specify the set of circumstances under which the declared value of a power would be achieved, the declaration shall state :

- a) the kind of statement of power (see 7.4) and of necessary, the ambient and operating condition (see 7.4.2).
- b) the kind of power output (see 7.3).
- c) the kind of power (see 7.3).
- d) the corresponding engine speed.

NOTE

1. The term used in a) to c) may be combined, for example, continuous net brake fuel stop power.
2. Where appropriate to the engine application and the method of manufacture, the power achieved may be subject to a tolerance on the declared power. The existence of and its magnitude shall be stated by the manufacturer.
3. Measurement of the powers referred to in this International Standard shall be determined in accordance with ISO 3046/2.

n.7.1.2 Unit of power

Power shall be expressed in kilowatts (kW). The addition of the equivalent metric or imperial "horsepower" is permitted for a transitional period.

n.7.1.3 Power and torque

For engines delivering power by a shaft or shafts, any power in this International Standard is a quantity proportional to the mean torque, calculated or shafts transmitting this torque.

For engines delivering power other than by a shaft or shafts, reference shall be made to the appropriate International Standard for the driven for the driven machine.

n.7.1.4 Engine speed

The speed of an engine is the mean rotational speed of its crankshaft or crankshatts in revolution per minute, except in the case of "free piston" engines where the speed is the number of cycles per minute of the reciprocating components.

n.7.1.5 Engine with integral gearing

When stating the power of an engine fitted with an integral (built-in) speed increasing or reducing device, the speed of the driving shaft extremist shall also be given at the declared engine speed.

n.7.2 Kinds of power

n.7.2.1 Indicated power

The total power developed in the working cylinders by the gases on the combustion side of the working pistons.

n.7.2.2 Brake power

The power of the sum of the powers measured at the extremity of the engine driving shaft or shafts.

n.7.2.2.1 Any statement of brake powers shall be supported by the following list of auxiliaries :

- a) essential dependent auxiliaries as defined in 6.2 and 6.4;
- b) essential independent as define in 6.3 and 6.4;
- c) non-essential dependent auxiliaries as defined in 6.2 and 6.5.

The power absorbed by the independent and the non-essential dependent auxiliaries may be significant, in such cases, their power requirement shall be declared.

Note - Examples of typical auxiliaries are listed in annex A for guidance purposes. These lists are not necessary complete.

n.7.2.3 Net brake power

The brake power measured when the engine is using only the auxiliaries listed in 7.2.2 a).

n.7.3 Kinds of power output

n.7.3.1 continuous power

Power which an engine is capable of delivering continuous, between the normal maintenance intervals stated by the manufacturer, at stated speed and under stated ambient conditions, the maintenance prescribed by the manufacturer being carried out.

n.7.3.1 Overload power

Power which an engine may be permitted to deliver, at stated ambient conditions, immediately after working at the continuous power.

The duration and frequency of use of overload power which is permitted will depend on the service application but adequate allowance shall be made in setting the engine fuel stop permit the overload power shall be expressed as a percentage of the continuous power, together with the duration and frequency permitted and the appropriate engine speed.

Unless otherwise stated an overload power of 110% of the continuous power at a speed corresponding to the engine application is permitted for a period of 12 hours of operation.

NOTES

1. The power of marine main propulsion engines is normally limited to continuous power, so that the overload power cannot be given in service. However, for special applications, marine main propulsion engines may develop overload power in service.
2. If the engine application is not determined, the engine manufacturer shall specify the overload power and the corresponding engine speed.

n.7.3.2 Fuel stop power

Power which an engine is capable of delivering during a stated period corresponding to its application, and at stated speed and under stated ambient conditions, with the fuel limit so that the fuel stop power cannot be exceeded.

n.7.4 Kinds of statements of power

n.7.4.1 ISO powers

n.7.4.1.1 ISO power

Power determined under the operating conditions of the manufacturer's test bed and adjusted to the standard reference conditions in clause 5.

n.7.4.1.2 ISO standard power

The name given of the continuous net brake power which the engine manufacturer declares that an engine is capable of delivering continuously, between the normal maintenance intervals stated by the manufacturer, and under the following conditions :

- a) at a stated speed under the operating conditions of the engine manufacturer's test bed;
- b) with the declared power adjusted to the standard reference conditions given in clause 5;
- c) the maintenance prescribed by the engine manufacturer being carried out.

n.7.4.2 Service power

Power determined under the ambient and operating conditions of an engine application.

To establish service power, the following conditions shall be taken into account :

- a) the ambient conditions, or any nominal ambient conditions according to the special requirements of inspecting and/or legislative authorities and/or classification societies, as specified by the customer (see clause 12);
- b) the normal duty of the engine;
- c) the expected interval between maintenance periods;
- d) the nature and amount of the supervision required;
- e) all information relevant to the operation of the engine in service (see clauses 12 and 13).

n.8. Declarations of fuel consumption

n.8.1 Definitions

n.8.1.1 Fuel consumption

The quantity of fuel consumed by an engine per unit of time at a state power and under stated conditions.

The quantity of liquid fuels shall be expressed in mass units (kg).

The quantity of gaseous fuels shall be expressed in energy units (J).

n.8.1.2 Specific fuel consumption

The fuel consumption per unit of power.

n.8.1.3 ISO specific fuel consumption

The name given in the specific fuel consumption at the ISO standard power.

If not otherwise specified by the manufacturer, a declared specific fuel consumption shall be considered to be the ISO specific fuel consumption.

n.8.2 Reference calorific value of fuels

n.8.2.1 Liquid fuel engines

The declared specific fuel consumption of a liquid fuel engine shall be related to a reference lower calorific value of 42,000 kJ/kg (10,030 kcal/kg).

n.8.2.2 Gas engines

The declared specific fuel consumption of a gas engines shall be related to a stated lower calorific value the gas. The type of gas shall be declared.

n.8.2.3 Specific fuel consumption declarations

The specific fuel consumption of an engine shall be declared at :

- a) the ISO standard power;
- b) (if required by special agreement) at any other declared powers and at specific engine speeds appropriate to the particular engine application.

Unless otherwise states, a deviation of +5% is permitted for the specific fuel consumption for the declared power.

n.9. Declarations of lubricating oil consumption 1 Lubricating oil consumption

n.9.1 Lubricating oil consumption

The quantity of lubricating oil consumed by an engine per unit of time. This quantity is used for guidance. It shall be expressed in litres or kilograms per engine operating hour at the declared power and engine speed.

n.9.2 The lubricating oil consumption after a stated period of running-in shall be declared.

n.9.3 The oil discarded during an engine oil change shall be not included in the lubricating oil consumption declaration.

n.10. Adjustment of net brake power for ambient conditions

n.10.1 When it is required to operate the engine under conditions difference from the standard reference conditions given in clause 5, the net brake power output shall be adjusted to or from the standard reference conditions by the following formulae (see note 1) :

$$P_x = \alpha P_r \quad (n-1)$$

$$\alpha = k - 0.7(1-k) \left(\frac{1}{\eta_m} - 1 \right) \quad (\text{see note 2}) \quad (n-2)$$

$$k = \left(\frac{p_x - a\phi_x p_{sx}}{p_r - a\phi_r p_{sr}} \right)^m \left(\frac{T_r}{T_x} \right)^n \left(\frac{T_{cr}}{T_{cx}} \right)^q \quad (n-3)$$

n.10.2 In the case of turbocharged engines in which the limits of turbocharger speed and turbocharger turbine inlet temperature have not been reached at the declared power under standard reference conditions, the manufacturer may declare substitute reference conditions to or from which power adjustments is to be made.

The following formulae (4) and (5) will then be used instead of formula (3)

$$k = \left(\frac{p_x}{p_r} \right)^m \left(\frac{T_r}{T_x} \right)^n \left(\frac{T_{cr}}{T_{cx}} \right)^q \quad (n-4)$$

$$p_{ra} = P_r \times \left(\frac{\pi_r}{\pi_{max}} \right) \quad (n-5)$$

Where :

P_r is the brake power;

p_r is the standard reference total barometric pressure;

p_{sr} is the saturation vapour pressure under standard reference conditions;

ϕ_r is the standard reference relative humidity;

T_r is the standard reference absolute air temperature;

T_{cr} is the standard reference absolute charge or coolant temperature;

P_{ra} is the substitute reference total barometric pressure given by formula (5);

T_{ra} is the substitute reference absolute air temperature to be stated by the manufacturer;

π_r is the boost pressure ratio at declared power under standard reference conditions to be stated by the manufacturer;

π_{max} is the maximum available boost pressure ratio to be stated by the manufacturer;

α is the power adjustment factor;

k is the ratio of indicated power;

η_m is the mechanical efficiency (see note 4);

P_x is the brake power under the conditions being considered;

p_x is the total barometric pressure condition being considered;

p_{sx} is the saturation vapour pressure under pressure the conditions being considered;

ϕ_x is the relative humidity condition being considered;

T_x is the absolute air temperature being considered;

T_{cr} is the absolute charge air coolant temperature at charge air cooler inlet being considered.

The factor a and exponent m , n , and q have the numerical value given in table 1 (see note 5).

NOTES

- For the convenience of users of these formulae, reference may be made to tables and nomograms in annexes B to 0, which also include numerical examples.

2. When the ambient conditions are more favourable than the standard reference conditions, the declared power under the ambient conditions may be limited by the manufacturer to the declared power at the standard reference conditions.

3. If the relative humidity is not known, a value of 60% should be assumed in formulae references A, E and G in table 1.

For all other formulae references the power adjustment is independent of humidity ($a = 0$).

4. The value of mechanical efficiency shall be stated by the engine manufacturer. In the absence of any such statement, the value of $\eta_m = 0.80$ will be assumed.

5. When declaring the ISO standard power the engine manufacturer shall state which of the formulae references in table 1 is applicable.

Table n-1 - Numerical values for power adjustment

Engine type	Condition	Formula reference	Factor	Exponents		
			a	m	n	q
Compression ignition oil engine and dual-fuel engines	Non - turbocharged	Power limited by air excess	A	1	1	0.75
		Power limited by thermal reason	B	0	1	0
	Turbocarged without charge air cooling	Low and medium speed	C	0	0.7	2
	Turbocarged with charge air cooling		D	0	0.7	1.2
Spark ignition engines using gaseous fuel	Non - turbocharged		E	1	0.86	0.56
	Turbocharged with charge air cooling	Low and medium speed four-speed engine	F	0	0.57	0.55
Spark ignition engines using liquid fuel	Naturally aspirated		G	1	1	0.5

NOTE - The factors and exponents given in table 1 have been established by tests on a number of engines to be generally representative and shall be used in the absence of any other specific information; for example in formula reference D, for an engine with the charge air cooled by engine jacket water, the value for exponent q could be zero. At present, they apply only to the type of engines specified but table 1 will be extended to include other types when sufficient are available.

n.11 Adjustment of fuel consumption for ambient conditions

n.11.1 When it is required to operate the engine under conditions different from the standard reference conditions given in clause 5, the fuel consumption will differ from that declared for the standard reference conditions and shall be adjusted to or from the standard reference conditions.

The following formulae shall be used if other methods are not declared by the engine manufacturers :

$$b_x = \beta b_r \quad (n-6)$$

where $\beta = k/\alpha$ (n-7)

where :

b is the specific fuel consumption

β is the fuel consumption adjustment factor

α is the power adjustment factor (see 10.1)

k is the ratio of indicated power (see 10.1)

Subscript r corresponds to values under the standard reference conditions.

Subscript x corresponds to values the conditions being considered.

NOTE - For the convenience of users of these formulae, reference may be made to the tables and nomograms in annexes B to O, which also include numerical examples.

n.12 Information to be supplied by the customer

The customer shall supply the following information concerning the required power :

- a) The application and the power required from the engine and details arising therefrom.
- b) The expected frequency and duration of the required powered and the corresponding engine speeds.
- c) Site conditions
 - 1) Site barometric pressure (highest and lowest reading available; if no pressure data are available the altitude above sea level).
 - 2) The monthly mean minimum and maximum air temperatures during the hottest and coldest months of the year.

- 3) The highest and lowest ambient air temperatures around the engine.
- 4) The relative humidity (or alternatively the water vapour pressure or the wet and dry bulb temperature) ruling at the maximum temperature conditions.
- 5) The maximum and minimum temperature of the cooling water available.
- d) The specification and lower calorific value of the fuel available.
- e) Whether the engine is to comply with the requirements of any classification society or with special requirements.
- f) The probable period for which the engine will be running continuously, and the duration of maximum and minimum load.
- g) Any other information appropriate to the particular engine application.

n.13 Information to supplied by the engine manufacturer

The engine manufacturer shall supply the following information :

- a) The declared powers.
- b) The corresponding crankshaft and output shaft speeds.
- NOTE - For certain applications of variable engines it is common practice to supply a power/speed diagram covering the ranges of power over which the engine can be used in continuous and in short period operation.
- c) The direction of rotation (see ISO 1204).
- d) The number and arrangement of cylinders (see ISO 1205).
- e) Whether the engine is two-stroke or four-stroke, naturally aspirated, mechanically pressure charge or turbocaharged and whether with or without charge air cooler.
- f) The quantity of air required for the operation of the engine for :
 - 1) combustion and scavenging;
 - 2) cooling and ventilation.
- g) The method of starting, apparatus supplied and additional apparatus required.
- h) The type and grade of lubricating oil(s) recommended.

- j) The type of governing, with speed droop of required (see ISO 3046/4 and ISO 3046/6).

If for variable speed duties, the working speed range and the idling speed.

If necessary, the critical speed range shall be indicated.

- k) The method of cooling and the capacity of the cooling system with the rates of circulation of the cooling fluids.
- m) (From air cooled engines only.) Whether hot air discharge ducting can be fitted.
- n) A schedule recommended maintenance and overhaul periods.
- p) Specifications and lower calorific values of fuels recommended.
- q) Maximum permissible back-pressure in the exhaust system and the maximum permissible intake depression.
- r) Any other information appropriate to the particular engine application.

ภาคผนวก ๊ฯ

การวัดอัตราการไฟลุกของอากาศ

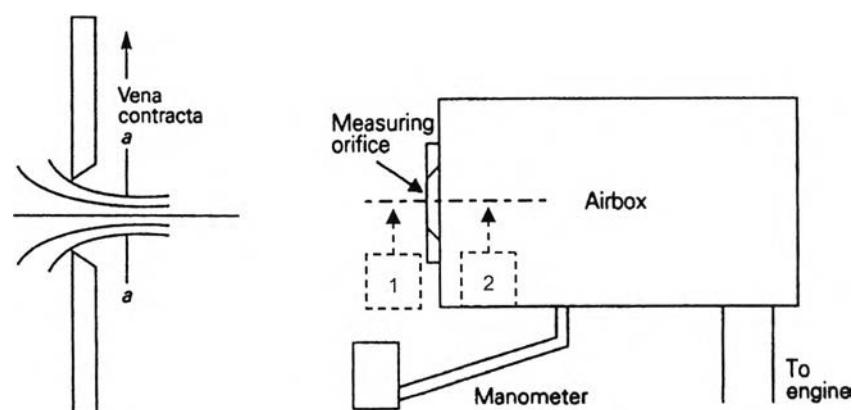

การวัดอัตราการไหลของอากาศด้วยวิธี Air box method [16], [17]

การวัดอัตราการไหลของอากาศด้วยวิธี Air box method เป็นการวัดโดยใช้แผ่นอิฐปูนประกอบกับถังพักอากาศ ซึ่งถังพักอากาศจะช่วยลดการระเพื่อมของอากาศที่ถูกดูดตามจังหวะการทำงานของเครื่องยนต์ ทำให้อากาศที่ในล่างแผ่นอิฐมีอัตราการไหลที่สม่ำเสมอสามารถวัดความดันต่อกคลื่นได้ถูกต้องมากขึ้น

ขนาดเส้นผ่านศูนย์กลางของแผ่นอิฐโดยประมาณ ที่อัตราการไหลต่างๆ แสดงดังตาราง ข-1

ตาราง ข-1 แสดงขนาดเส้นผ่านศูนย์กลางของอิฐโดยประมาณที่อัตราการไหลต่างๆ

Orifice diameter (mm.)	Air Flow rate (m^3/s)	Mass Flow rate (kg/s)
10	0.002	0.002
20	0.008	0.009
50	0.048	0.057
100	0.19	0.23
150	0.43	0.51

รูปที่ ข-1 แสดงภาพการวัดอัตราการไหลของอากาศโดยวิธี Air box method [16]

ภาพข่ายแสดงการไหลของอากาศผ่านแผ่น orifice plate

ภาพขวางแสดงภาพ Orifice flow meter

ปริมาตรของถังที่เล็กที่สุดที่จะทำให้มีเกิดการภาวะเพื่อมของอากาศที่เหลือ ได้ถูกวิเคราะห์โดย Kastner [25] ดังสมการ (ข-1)

$$V_b = \frac{417 \times 10^6 K^4 d^2}{N_c V_s n_{min}^2} \quad (\text{ข-1})$$

- โดยที่ V_b คือ ปริมาตรถังพักอากาศที่เล็กที่สุด (m^3)
 K คือ ค่าคงที่ มีค่าเท่ากับ 1 สำหรับเครื่องยนต์ 2 จังหวะ และ
 มีค่าเท่ากับ 2 สำหรับเครื่องยนต์ 4 จังหวะ
 d คือ เส้นผ่านศูนย์กลางของ orifice plate (m)
 N_c คือ จำนวนกระบวนการบุบของเครื่องยนต์
 V_s คือ ปริมาตรช่วงขั้กถูกสูบ (m^3)
 N_{min} คือ ความเร็วรอบเครื่องยนต์ที่น้อยที่สุด (rev/min)

สมมติให้อากาศที่เหลือผ่าน orifice plate เป็นของในลักษณะไม่ได้ (Incompressible flow) และพิจารณาให้ความหนาแน่นของอากาศคงที่ จากสมการเบอนูลี จะได้ว่า

$$\frac{p_1}{\gamma_{air}} + \frac{v_1^2}{2g} + Z_1 = \frac{p_2}{\gamma_{air}} + \frac{v_2^2}{2g} + Z_2 \quad (\text{ข-2})$$

- โดยที่ p คือ ความดัน (kPa)
 v คือ ความเร็วอากาศ (m/s)
 γ_{air} คือ น้ำหนักจำเพาะของอากาศ ($kg/m^2 \cdot s^2$) = $\rho_{air} g$
 ρ_{air} คือ ความหนาแน่นของอากาศ (kg/m^3) เท่ากับ 1.165 kg/m^3 ที่ $30^\circ C$
 Z คือ ระดับความสูง (m)
 g คือ ค่าความเร่งเนื่องจากแรงโน้มถ่วงของโลก (m/s^2) เท่ากับ 9.807 m/s^2
 ตัวทั้ง 1 และ 2 คือตำแหน่งส่วน 1 และ 2 ในรูป ข-1 ขวา ตามลำดับ

เนื่องจากส่วน 1 เป็นอากาศนิ่ง และทั้งสองส่วนอยู่ในระดับความสูงเดียวกัน ดังนั้น จะได้ความเร็วของอากาศ ตามสมการที่ (ข-5)

$$v_2 = \sqrt{\frac{2\Delta p}{\rho_{air}}} \quad (\text{ก}-3)$$

การไหลผ่าน orifice จะเกิด Vena contracta ซึ่งจะทำให้การไหลจริงน้อยกว่าทฤษฎีเสมอ ดังนั้นเมื่อคิดการไหลแบบคงตัว จะได้อัตราการไหลโดยมวลของอากาศ คือ

$$m_a = C_{DO} \rho_{air} v A_o \quad (\text{ก}-4)$$

โดยที่ C_{DO} คือ Discharge coefficient ของ orifice plate

A_o คือขนาดของ orifice (m^2)

การวัดผลต่างความดันตกคร่อม orifice plate จะวัดโดยใช้มานอยเมเตอร์ ซึ่งจะได้ค่า head ในหน่วย $mm.H_2O$ ซึ่งสามารถคำนวณหาผลต่างความดันตกคร่อม orifice plate ได้จากสมการ

$$\Delta p = \rho_{H_2O} g \Delta h \quad (\text{ก}-5)$$

โดยที่ Δh คือ ผลต่าง Head ที่อ่านได้จากมานอยเมเตอร์ (mmH_2O)

ρ_{H_2O} คือ ความหนาแน่นของอากาศ (kg/m^3) เท่ากับ $997 kg/m^3$

เมื่อนำสมการ (ก-5) และ (ก-7) มาแทนลงในสมการ (ก-6) จะได้สมการที่นำไปใช้งาน คือ

$$m_a = C_{DO} A_o \sqrt{2\rho_{air} \rho_{H_2O} g \Delta h} \quad (\text{ก}-6)$$

ดังนั้นจากสมการ (ก-2) และ (ก-8) จะสามารถหาอัตราส่วนผลสมเชื้อเพลิงต่ออากาศ และ Equivalent ratio ได้จากการดังต่อไปนี้

$$F/A = \frac{\rho_f V/t}{C_{DO} A_o \sqrt{2\rho_{air} \rho_{H_2O} g \Delta h}} \quad (\text{ก}-7)$$

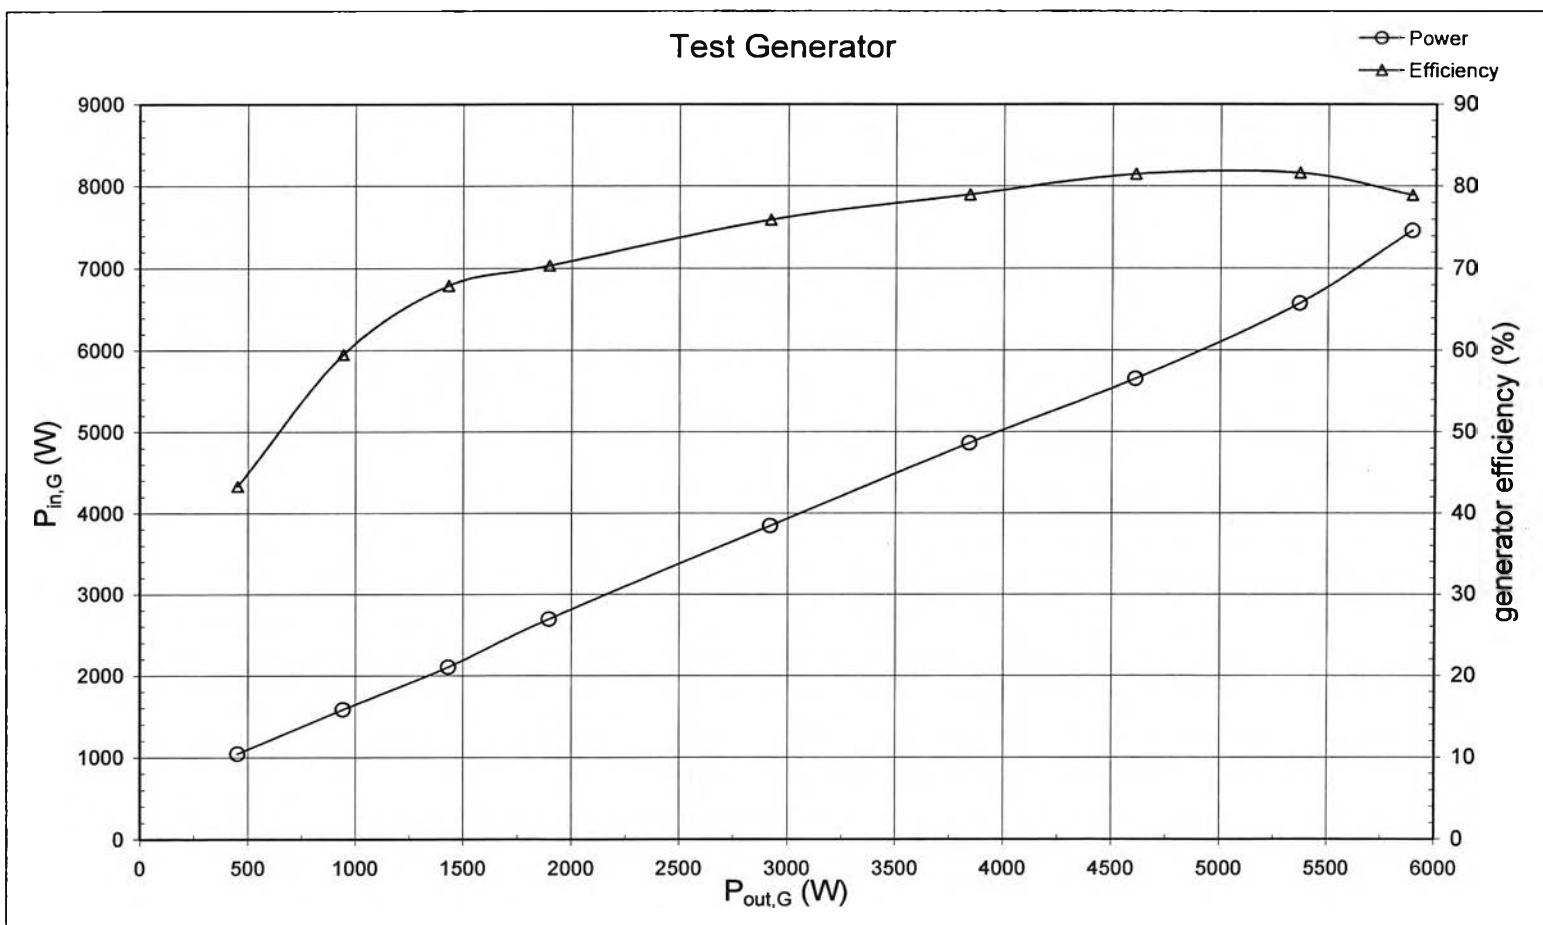

$$\text{Equivalent ratio} = \frac{(F/A)}{(F/A)_s}$$

ข้อมูลระบบก้าชซีวภาพและก้าชซีวภาพ

ฟาร์มที่ทำการทดสอบ

สถานที่ตั้ง เอส.พี.เอ็ม. ฟาร์ม หมู่ที่ 5 ตำบลลังมนนาว อำเภอปากท่อ จังหวัดราชบุรี โทร 032-

รูปที่ ง-1 แสดงบ่อหมักก้าชีวภาพที่ เอส.พี.เอ็ม. ฟาร์ม

ระบบก้าชีวภาพและระบบการทำงาน [18]

ระบบก้าชีวภาพที่เหมาะสมสำหรับใช้ในฟาร์มเลี้ยงสัตว์ โดยเฉพาะอย่างฟาร์มศุกรนั้นมีองค์ประกอบหลายอย่างที่ประกอบกันขึ้นมาเป็นระบบ ซึ่งแต่ละองค์ประกอบต้องมีขนาดที่ถูกต้องและทำงานสัมพันธ์กันอย่างต่อเนื่อง ระบบจึงสามารถทำงานอย่างมีประสิทธิภาพ การทำงานของระบบก้าชีวภาพสามารถแบ่งเป็นลำดับขั้นการทำงานต่อเนื่องกัน ดังนี้

1. รากและท่อส่งน้ำเสีย (Waste water Transportation System) ทำหน้าที่รับน้ำเสียจากโรงเรือนเลี้ยงสัตว์ส่งไปยังระบบก้าชีวภาพ
2. บ่อรับน้ำเสีย (Collector Tank) ทำหน้าที่กักเก็บน้ำเสียไว้ระดับหนึ่งก่อนจะสูบส่งเข้าระบบก้าชีวภาพ

3. บ่อหมักแบบร่าง (Channeled Digester) เป็นบ่อหมักที่ให้กลุ่มจุลทรรศน์ไม่ต้องการอากาศทำงานน้ำที่อยู่ในถังสารอินทรีย์ไม่เกิดในญี่ปุ่นน้ำเสียให้มีไม่เกิดเด็กลงจนกล้ายเป็นสารละลาย บางส่วนจะถูกเปลี่ยนเป็นก๊าซชีวภาพ ขณะเดียวกันบ่อหมักร่างก็ทำงานที่เป็นบ่อตัดตะกอน สารอินทรีย์ไม่เกิดในญี่ปุ่นทั้งสภาพแล้วพร้อมทั้งช่วยกักเก็บน้ำบางส่วนที่ปั้นเป็นสารละลายอินทรีย์และค่อย ๆ ทยอยปล่อยออกสู่องค์ประกอบของระบบขั้นต่อไปอย่างต่อเนื่อง

4. บ่อหมักแบบ UASB (Upflow Anaerobic Sludge Blanket) เป็นบ่อหมักไว้อากาศแบบเรือทำงานน้ำที่อยู่ในถังสารอินทรีย์ในรูปของสารละลายที่ปั้นเป็นปืนอยู่ในน้ำซึ่งลดลงมาจากบ่อหมักอยู่จนคงสภาพแล้วจากบ่อหมักแบบร่างให้เกิดเป็นก๊าซชีวภาพเข็นเดียวกัน ก๊าซที่ผลิตได้นั้นจะถูกส่งไปกักเก็บไว้ได้ผ่านพลาสติกเก็บก๊าซของบ่อหมักแบบร่าง

5. ลานกรองของแข็ง (Sand Bed Filter) ทำงานน้ำที่กรองแยกจากการตัดก่อนของแข็งออกจากน้ำมูลหมักอยู่จนคงสภาพแล้วจากบ่อหมักแบบร่างหากให้แห้งเพื่อนำไปใช้หรือจำหน่ายเป็นน้ำยิ่งอินทรีย์คุณภาพดีต่อไป

6. ระบบบำบัดขั้นหลัง (Post Treatment) ทำงานน้ำที่บำบัดและลดปริมาณสารอินทรีย์ที่ยังหลงเหลืออยู่บ้างอีกเล็กน้อยของน้ำเสียที่ผ่านกระบวนการบำบัดจากระบบก๊าซชีวภาพโดยรวมมาแล้วให้มีความสะอาดมากยิ่งขึ้นเป็นการทำงานเสียงแบบธรรมชาติ โดยมีองค์ประกอบและหลักการทำงานดังนี้

6.1 สระปรับสภาพ (Stabilization Pond) ทำงานน้ำที่พักน้ำเสียที่ผ่านการทำจัดจากระบบก๊าซชีวภาพมาแล้วและส่งเข้าสู่บึงประดิษฐ์ต่อไป

6.2 บึงประดิษฐ์ (Wetland) ทำงานน้ำที่ปรับปรุงคุณภาพของน้ำเสีย โดยอาศัยกลุ่มสิ่งมีชีวิตในน้ำ เช่น ต้นหญ้าป่า สาหร่าย จุลินทรีย์ และสิ่งมีชีวิตต่าง ๆ ที่ทำงานสัมพันธ์กันเป็นระบบในเวียน

6.3 สระพกน้ำ (Reservoir) ทำงานน้ำที่กักเก็บน้ำที่ผ่านการทำบัดแล้วเพื่อให้หมุนเวียนมาทำความสะอาดโดยเรือนลี้ยงสตอร์ โดยเฉพาะอย่างยิ่งในฤดูแล้งและจะถูกปล่อยออกสู่ภายนอกในฤดูฝนเมื่อมีน้ำมากเกินความต้องการ

น้ำเสียที่ผ่านการทำบัดครบถ้วนตอนแล้วสามารถหมุนเวียนกลับมาใช้ภายในฟาร์มเพื่อทำความสะอาดโดยสตอร์ได้เป็นการช่วยลดปริมาณการใช้น้ำ ซึ่งสามารถลดค่าใช้จ่ายของฟาร์มได้อีกด้วยหนึ่งด้วย

ข้อมูลก๊าซชีวภาพ [19]

โดยทำการตรวจวัดขนาดระบบ 4,000 ลบ.ม. ณ วันที่ 23 พ.ย. 2548 ดังนี้

1. ออกจากปอนมักราง

CH_4	72% by Vol.
CO_2	20% by Vol.
N_2	6.5% by Vol.
O_2	1.5% by Vol.
H_2S	200 ppm

2. ตำแหน่งที่ออกจากชุดกรองก๊าซชีวภาพ

CH_4	72% by Vol.
CO_2	20% by Vol.
N_2	6.5% by Vol.
O_2	1.5% by Vol.
H_2S	20 ppm

3. ตำแหน่งที่ใช้ในการทดสอบ

CH_4	73% by Vol.
CO_2	19% by Vol.
N_2	6.5% by Vol.
O_2	1.5% by Vol.
H_2S	20 ppm

สำหรับก๊าซชีวภาพที่ใช้ในการทดสอบเครื่องยนต์ของงานวิจัยนี้ได้ผ่านกระบวนการกรอง H_2S ออกบางส่วนแล้วในเบื้องต้น และค่าความร้อนของก๊าซชีวภาพที่ตำแหน่งทดสอบประมาณ 26.17 MJ/kg (คำนวนจากค่าเมืองในก๊าซชีวภาพ 73% โดยปริมาตร)

ข้อมูลผลการวิเคราะห์น้ำมันหล่อลื่น

รูปที่ ช-1 แสดงใบรายงานผลการทดสอบน้ำมันหล่อลื่นใหม่ ยี่ห้อ ข้าง มาตรฐาน SAE 40 API
CF (54326)

Report Details						Page 1 of 1		
Cust. Code : 18004	Cust. Name : ICE R&D LAB	Site Name : Biogas Project	Condition :					
Address : Faculty of Engineering Chulalongkorn University Bangkok	Location :	Unit Number : New Oil CHANG SAE40 API CF	Oil	Wear	Contamination			
Test code : 803	Lube System Capacity :	Unit type : NEW OIL						
		Unit make :						
		Unit model :						
		Oil grade : CHANG SAE40 API CF						
Recommendations								
Data is provided below.								
Date ID : 54326	Test Method : 26-Feb-08	Alarm Limit Range						
Date sampled : Not Available	Hours on Oil : Not Available	Limit Name : New Oil for Baseline Purposes						
Hours on Unit : 815201	Bottle ID : 815201							
Condition History		Oil	Wear	Cont.				
Specimen Test	Method	Unit	RDE fine	RFS coarse				
Iron			0.6					
Chromium			0.0					
Lead			0.6					
Copper			0.1					
Tin			0.2					
Aluminum			0.9					
Nickel			0.1					
Silver			0.0					
Molybdenum			66.8					
Titanium			0.0					
Silicon			15.9					
	Method	Unit	Additive					
Boron			0					
Sodium			2					
Magnesium			11					
Calcium			2539					
Barium			0					
Phosphorus			784					
Zinc			863					
Physical Test	Method	Unit	Viscosity					
Viscosity @ 40 °C			14.8					
Viscosity @ 100 °C								
Viscosity Index	Method	Unit	FTIR					
Oxidation			6.7					
Nitration			5.5					
Sulfation			13.9					
Fuel			0.00					
Water			0.027					
Glycol			0					
Soot			0.00					
	Method	Unit	Other Test					
TAN			10.3					
TBN								
Flash Point								
<p>Note: Alarm Limits are variable and dependent upon dataset size and to be used as general guideline. <input checked="" type="checkbox"/> No Sign or <input type="checkbox"/> or <input type="checkbox"/> (first level warning limit) or <input type="checkbox"/> or <input type="checkbox"/> (second level warning limit); <input type="checkbox"/> First level warning limit is Upper level and/or Lower level; <input type="checkbox"/> Second level warning limit is Upper level and/or Lower level; <input type="checkbox"/> No warranty is expressed or implied for this report.</p>								
<p>Accuracy of interpretation and recommendation are based on representative sample and information supplied.</p>

LubeCheck™ - Oil Analysis for Predictive Maintenance													
Page 1 of 3													
Cust. Code	18004			Site Name			Biogas Project			Condition			
Cust. Name	ICE R&D LAB			Location			Pump From Dip-Stick Port			Oil			
Address	Faculty of Engineering Chulalongkorn University Bangkok			Unit Number			KUBOTA RT 120.011162			Wear			
Test code	903			Unit type			Engine Diesel			Contain-			
Lube System Capacity	2.75 Liters			Unit make			KUBOTA			nation			
				Unit model			RT 120						
				Oil grade			CHANG SAE 40 API CF						
Recommendations													
Note some test values are near to the Alarm Limits, or slightly over the Alarm Limits, but are not considered serious at this time. All other wear tests and oil condition tests appear satisfactory, and the oil was still serviceable at the time of sampling. Continue routine sampling interval.

Note: Alarm limits are variable and dependent upon dataset size and to be used as general guideline. No significant change in oil condition since last sample taken. First level warning limit = 1.5 times the mean value. Second level warning limit = 2 times the mean value. First level warning limit in Upper level known lower level. Second level warning limit in Upper level known lower level. Accuracy of interpretation and recommendation are based on representative samples and information supplied. No warranty is expressed on customer facilities report.

Note: Alarm Limits are variable and dependent upon dataset size. Below to be used as general guideline:

No Sign or Normal : or (First level warning limit) , A or (Second level warning limit)

First level warning limit in Upper level and Lower level

Second level warning limit in Upper level and Lower level

No warranty is expressed or implied by this report.

Accuracy of interpretation and recommendation are based on representatives sample and information provided.

Recommendations																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																	
Dirt (silicon) is present and resulting in abrasive wear. Recommend check to determine how dirt is entering the system and correct the problem to prevent further dirt entry. Continue routine sampling interval.

CJS LubeCheck™ - Oil Analysis for Predictive Maintenance											
Page 1 of 3											
Cust. Code : 18004	Site Name : Biogas Project			Condition :							
Cust. Name : ICE R&D LAB	Location : Pump From Dip-Stick Port			Oil	Wear	Contamination					
Address : Faculty of Engineering Chulalongkorn University Bangkok	Unit Number : KUBOTA RT 120 011192										
Test code : 803	Unit type : Engine Diesel										
Lube System Capacity : 2.75 Liters	Unit make : KUBOTA										
	Unit model : RT 120										
	Oil grade : CHANG SAE 40 API CF										
Recommendations											
Dirt (silicon) is present and resulting in abrasive wear.											
Recommend check to determine how dirt is entering the system and correct the problem to prevent further dirt entry.											
Continue routine sampling interval.

Address : Faculty of Engineering Chulalongkorn University Bangkok	Unit Number : KUBOTA RT 120 011192			Normal																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																		
Test code : 803	Unit type : Engine Diesel			Normal																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																		
Lube System Capacity : 275 Litres	Unit make : KUBOTA			Normal																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																		
	Unit model : RT 120			Normal																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																		
	Oil grade : CHANG SAE40 API CF			Normal																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																		
Recommendations																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																						
Dirt (silicon) is present and resulting in abrasive wear. Recommend check to determine how dirt is entering the system and correct the problem to prevent further dirt entry. Continue routine sampling interval.

Note: Alarm Limits are variable and dependent upon dataset size and to be used as general guideline.
No alarm is triggered if the value is below the first level warning limit or above the second level warning limit.
First level warning limit is higher than the lower limit.
Second level warning limit is Upper limit and Lower limit.
No warranty is expressed or implied for this report.

รูปที่ ช-13 แสดงใบรายงานผลการทดสอบน้ำมันหล่อลื่นจากเครื่องยนต์ที่ใช้น้ำมันดีเซลร่วมกับ ก๊าซเชิงพาหงส์ผ่านการทดสอบความทนทาน 290(55997), 300(55955) ข้ามโน้ต

LubeCheck™ - Oil Analysis for Predictive Maintenance									
Page 1 of 3									
Cust. Code : 18004	Site Name : Biogas Project			Condition of Oil Wear Contamination					
Cust. Name : ICE R&D LAB	Location : Pump From Dip-Stick Port			Normal	Normal	Normal	Normal	Normal	
Address : Faculty of Engineering Chulalongkorn University Bangkok	Unit Number : KUBOTA RT 120 011192			Oil	Wear	Contamination			
Test code : BG3	Unit type : Engine Diesel								
Lube System Capacity : 2.75 Liters	Unit make : KUBOTA								
	Unit model : RT 120								
	Oil grade : CHANG SAE40 API CF								
Recommendations									
<p>Dirt (silicon) is present and resulting in abrasive wear.</p> <p>Recommend check to determine how dirt is entering the system and correct the problem to prevent further dirt entry.</p> <p>Continue routine sampling interval.</p>									
Lab ID : 55998	Result : 03-Apr-06	55997	Result : 03-Apr-06	55955	Result : 02-Apr-06	Alarm Limit Range			
Date sampled : 120	Hours on Oil : 360	Hours on Unit : 360	Unit type : 110	Unit make : 340	Unit model : 340	Limit Name : Engine Diesel General SAE 40
