LIST OF TABLES

Table		Page
1	Classification of animal lectins by Gudmundur Johann Arason	16
2	Summary of lectin categories by Roger B. Dodd and Kurt Drickamer	17
3	Properties of purified lectins from Penaeid shrimp	20
4	Hemagglutinating activity (HA) of serum from <i>Penaeus merguensis</i> against different types of mammalian and animal erythrocytes	39
5	Effects of temperature on hemagglutination	40
6	Effects of pH on hemagglutination	40
7	Effects of divalent cation on hemagglutination	40
8	The sugar specificity of lectin from serum of <i>Penaeus mergueinsis</i>	42
9	Purification of <i>Penaeus merguensis</i> lectin	45
10	Partial amino acid sequences of the purified lectin subunits from hemolymph of <i>Penaeus merguensis</i>	48
11	Antibacterial activity in serum, hemolymph affinity and gel filtration purified <i>Penaeus merguensis</i> lectin incubated with <i>Vibrio</i> spp. for 1 h. Percentage of inhibition was determined from the appropriate serial dilution as colony forming unit (CFU)	54
12	Protein expression in hemolymph of <i>Penaeus merguensis</i> after challenging with <i>Vibrio harveyi</i>	60
13	Hemagglutinating activity (HA) of serum hemolymph haemocyte lysate supernatant from <i>P. merguensis</i> against different types of mammalian and animal erythrocytes	64

LIST OF FIGURES

Figure		Page
1	Geographical distribution for <i>Penaeus merguensis</i>	3
2	Geographical distribution for <i>Penaeus merguensis</i> in the Upper Gulf of Thailand	4
3	Global capture production for <i>Penaeus merguensis</i>	5
4	Global aquaculture production for <i>Penaeus merguensis</i>	5
5	Thailand marine shrimp culture production during 1985-2004	6
6	General morphological features of Penaeid shrimp (<i>Penaeus latisulcatus</i>)	7
7	Life cycle of shrimp showing distribution with depth, a) shrimp eggs b) nauplius c) protozoa d) mysis e) postmysis f) juvenile and g) mature adult shrimp	9
8	Affinity chromatography of the <i>P. merguensis</i> lectin on mucin CNBr-activated Sepharose 4-B	44
9	Gel filtration of the <i>P. merguensis</i> lectin on Sephacryl S-200	44
10	SDS-PAGE (12.5%) of the <i>P. merguensis</i> lectin eluted from PSM-Sepharose 4B column and Sephacryl S-200 column	45
11	2-D gel performed with 200 µg of affinity purified lectin shows the separation of subunits by using Immobiline DryStrip pH 3-10 (13 cm)	47
12	Mass spectrum of spot no.1 by LC-MS/MS; precursor mass 974	49
13	Mass spectrum of spot no. 1 by LC-MS/MS; precursor mass 1047	49
14	Mass spectrum of spot no.1 by LC-MS/MS; precursor mass 1062	50

LIST OF FIGURES (Continued)

Figure		Page
15	Mass spectrum of spot no.1 by LC-MS/MS; precursor mass 1393	50
16	Mass spectrum of spot no. 2 by LC-MS/MS; precursor mass 671.86	51
17	Mass spectrum of spot no. 3 by LC-MS/MS; precursor mass 820.62	51
18	Mass spectrum of spot no. 4 by LC-MS/MS; precursor mass 591.10	52
19	Mass spectrum of spot no. 5 by LC-MS/MS; precursor mass 725.74	52
20	Mass spectrum of spot no. 6 by LC-MS/MS; precursor mass 620.88	53
21	Amino acid sequence which partial amino acid HWFSLFNPR blase to NCBI (Mass spectrum of Spot 6 by LC-MS/MS; precursor mass 602.88)	53
22	Bacterial clearance activity in banana prawn after challenge with <i>Vibrio harveyi</i>	55
23	Protein profile of hemolymph from the <i>P. merguensis</i> in 10% SDS-PAGE (13 cm,) after challenged with <i>Vibrio harveyi</i>	57
24	2D maps of colloidal Coomassie brilliant blue G-250 stained proteins of the affinity purified lectin after post injection with <i>V. harveyi</i> at 1 min (A) and 120 min (B). The protein was separated by 2-Dimensional Gel Electrophoresis. Isoelectric focusing (IEF) was performed in the Immobiline™ DryStrip pH3-10, 13 cm, IPG strips in a disposable cassette	58

LIST OF FIGURES (Continued)

Figure		Page
25	2D maps of colloidal Coomassie brilliant blue G-250 stained proteins of the affinity purified lectin after post injection with <i>V. harveyi</i> at 1 min (A) 15 min (B) and 120 min (C)	59
26	Light micrographs of shrimp hemocytes, <i>Penaeus merguensis</i> . (A) hyaline hemocytes; (B) a small granule hemocyte (SGH); (C) large granule hemocytes (LGH)	62
27	Total and differential counts of hemocytes in <i>Penaeus merguensis</i> hemolymph (values are average \pm SD, n=30) Total hemocyte count (THC), small granule hemocyte (SGH), large granule hemocyte (LGH)	62
28	12.5% SDS-PAGE of hemolymph (lane 2) serum (lane 3) and hemocyte lysate supernatant (lane 4) proteins in reducing condition. The protein in samples were treated with dithiothreitol (DTT). Protein bands were visualized with Silver staining	63
29	Antibacterial activity of serum, affinity purified lectin (AF) and gel filtration purified lectin (GF) (~ 1.28 μ g proteins) and HLS (~ 2 μ g proteins) from hemolymph and hemocyte of <i>Penaeus merguensis</i>	66

Appendix Figure

1	2-D maps of colloidal Coomassie brilliant blue G-250 stained proteins of the affinity purified lectin after post injection with <i>V. harveyi</i> at 1 min (A) Green and red label spots are responded to <i>V. harveyi</i> infection	90
---	---	----
