

ACKNOWLEDGEMENTS

First, I would like to give my sincere thanks and express my respect to my supervisor, Associate Professor Apinya Duangchan, for advising and giving me knowledge. I am very grateful to my committee, Associate Professor Sirikalaya Suvachitanont and Assistant Professor Attasak Jaree, for giving comments and approving my thesis. I also thank staffs of the Department of Chemical Engineering, Kasetsart University for their support on my thesis.

I would like to give thanks to members of the Dr. Apinya's research group for their encouragement and discussion. Finally, I am grateful to my parents for the moral support during my study.

For financial support, I would like to thank the staff development scholarship, the commission on higher education for supporting my studyies in Master degree and Doctoral degree. I also thank the Graduate School, Kasetsart University for the research fund.
