

ACKNOWLEDGEMENT

I am greatly indebted to my advisor, Assoc. Prof. Dr. Attera Worayingyong, for valuable guiding me into the field of inorganic chemistry and for her support and encouragement throughout this project. I am grateful to Assoc. Prof. Dr. Apisit Songsasen and Assist. Prof. Atchana Wongchaisuwat, members of committee, for their advices and many fruitful suggestions.

I wish to thank Professor Piyasarn Prasertdham, Head of the Faculty of Chemical engineering, Chulalongkorn University, for his valuable discussion and encouragement. Thanks go as well to team of the Laboratory of chemical engineering for endless discussions. Asst. Dr. Prayoon Songsirithikul at National Synchrotron Research Center, Nakhon Ratchasima, is especially thanked for valuable advice and the technical support of the x-ray photoelectron spectroscopy. Mr. Payoon Santhongkaew at Department of Materials Engineering, Kasetsart University, for technical support of the x-ray diffraction.

The Kasetsart University Research and Development Institute (KURDI), Graduate School, and Chemistry Department, Kasetsart University, the financial assistance that supported this work are also acknowledged.

My colleagues, in and out of the Laboratory made an invaluable contribution through their help and wide ranging conversation.

Finally, I would like to thank my parents and my brothers for their continuous support and their faith in me during these long and hard years of work.

Praewpilin Kangvansura
