ACKNOWLEDGEMENT

This work was accomplished under the supervision of Professor H. Taguchi, Director of the ICBiotech and Professor of the Department of Fermentation Technology, Faculty of Engineering, Osaka University; and Dr. Naline Nilubol, Director of the Institute of Biotechnology and Genetic Engineering, Chulalongkorn University. I am greatly indebted to their kindness, continuous guidance, and invaluable suggestions throughout the course of this study. Specially thanks to Dr. T. Nihira for his indispensable aid, invaluable suggestions and discussion. Sincere thanks to Dr. H. Sawada of Yakult Central Institute for Microbial Research for his helpful suggestions and performing the toxicity test. Many thanks to Dr. T. Yoshida for his useful comments and encouragements. I am grateful to Professors H. Okada, Y. Yamada, S. Aiba, Y. Oshima and K. Suga for their invaluable criticisms and reviewing the thesis. The thanks are also extended to Dr. S. Kinoshita, Dr. T. Seki and Dr. M. Kishimoto for their useful discussion.

I also wish to extend my appreciation to Dr. N. Takada for his guidance on strain identification, to Mr. T. Ueda, Mr. K. Yamada and Mr. H. Nishino for their assistances and cooperation during my stay in Japan. My gratitude is also extended to Mrs. F. Sawazumi for all of her kindness and helpfulness. I am most grateful to Japan Society for the Promotion of Science of which support enabled me to accomplish this work through the Ph. D. Dissertation (Ronpaku) Program. Finally, I would like to express my deep appreciation to my family, who patiently endured many years that were devoted to this work and who gave encouragement when it was most needed.
