INTRODUCTION	1
General Introduction	1
Statement of Problems	1
Objective of Research	2
Scope of Research.....	2
LITERATURE REVIEW	3
Landslides	3
Factors Affecting Landslide.....	8
Landslide Hazard Map in Thailand.....	10
General Method of Evaluating Landslide Hazard Zonation	15
Weighting Factor Method	20
Rock Mass Qualitative System	21
Cut Slope.....	25
Logistic Regression.....	27
General Information of Phuket Province	28
MATERIALS AND METHOD	34
Materials	34
Method	34
Data collection	35
Evaluation Natural landslide susceptibility map and hazard map	37
Field Investigation	37
Rock Mass Rating (RMR) and Slope Mass Rating (SMR) Estimation	37
Slope Condition data.....	39
Data verification for RMR and SMR factor	39
Evaluation Sensitive Area for Cut slope.....	40
Logistic regression.....	41
RESULTS AND DISCUSSION	42
Data Collection	42
Weighting Factor Analysis for Landslide Hazard Area.....	53
Processing of landslide susceptibility and hazard map (7 factors)	62
Field Investigation	73
Watershed Analysis	80
Weight Factor Analysis Including RMR Value.....	83
Processing Landslide Susceptibility and Hazard Map by Considering RMR Value.....	86
Weighting Factor Analysis Including SMR Value	95
Processing Landslide Susceptibility and Hazard Map by Considering SMR Value	98
Collect Slope Condition Data from Field Investigation	107

TABLE OF CONTENTS (Continued)

	Page
Failure Verification (RMR included).....	107
Processing Cut Slope Failure and Hazard Map by Considering RMR Factor Included	109
Failure Verification (SMR included)	114
Processing Cut Slope Failure Map and Hazard Map by Considering SMR Factor Included	116
Logistic Multiple Regression Analysis (RMR factors included)..	123
Processing Cut Slope Probability of Failure Map by Considering RMR Factor Included	126
Logistic Multiple Regression Analysis by SMR Factor Included	130
Processing Cut Slope Probability of Failure Map by Considering SMR Factor Included	133
CONCLUSIONS.....	137
RECOMMENDATION	140
LITERATURE CITED	141
APPENDIX.....	146

LIST OF TABLES

Table		Page
1	The landslide potential and the rang of probability	11
2	The detailed descriptions of different weighted factor values	12
3	The landslide potential and the rang of total score	13
4	The detailed descriptions of different weighted factor values	14
5	The landslide potential and the rang of total score	15
6	Rock mass rating.....	21
7	Adjustment rating for joints	23
8	Adjustment rating for methods of excavation of slopes	23
9	Tentative description of SMR classes.....	24
10	Discontinuity condition factor λ	24
11	Range of standard cut slope gradients for bedrock soil	26
12	Rainfall (mm.) in Muang Phuket	29
13	Relative humidity (%) in Muang Phuket	30
14	Mean temperature (°C) in Muang Phuket.....	30
15	Mean max. temperature (°C) in Muang Phuket.....	31
16	Mean min. temperature (°C) in Muang Phuket.....	31
17	Population density.....	32
18	Data collection for the analysis of landslide sensitive area	36
19	Plan area of 7 factors.....	42
20	Landslide potential classification of rock type	53
21	Potential landslide level of rock series in 6 provinces (by rock type).....	54
22	Landslide potential classification of lineament zone	55
23	Landslide potential classification of slope.....	55
24	Landslide potential classification of elevation.....	55
25	Landslide potential classification of surface drainage zone	55
26	Landslide potential classification of land used	56
27	Landslide potential classification of soil characteristic	56
28	Soil group (Department of Land Development, 2001)	56
29	Landslide potential classification of rainfall intensity	59
30	Landslide potential classification of rainfall intensity	60
31	Landslide potential classification of engineering soil properties..	60
32	The numerical weight assignment to the parameters influencing the landslide potential in Phuket	61
33	The landslide potential and the range of total score for all return periods of rainfall	62
34	Predicted landslide susceptibility area considering 7 related factors	65
35	Predicted landslide hazard area for 5 return periods of rainfall.... considering 7 related factors	72
36	Comparison of landslide potential area and landslide hazard area considering 7 related factors	73
37	Field investigation in 14 watersheds.....	80
38	Field investigation data for RMR rating	83

LIST OF TABLES (Continued)

Table		Page
39	Average rock mass rating classified by rock type	83
40	The numerical weight assignment to the RMR factor influencing the landslide in Phuket.	86
41	Area of landslide classes considered by including 7 related factors and RMR factor.....	89
42	Predicted landslide hazard area for 5 return periods of rainfall include related factors and RMR factor	94
43	Example of SMR estimation PK06.....	95
44	Average slope mass rating classified by rock type	95
45	The numerical weight assignment to the SMR factor influencing the landslide in Phuket.....	98
46	Area of landslide classes considered by including 7 related factors and SMR factor	101
47	Predicted landslide hazard area for 5 return periods of rainfall including 7 related factors and SMR factor	105
48	The landslide potential and the range of total score considering RMR factor for all return period of rainfall	109
49	Area of failure cut slope classes considered by including 7 related factors and RMR factor.....	111
50	Predicted failure cut slope hazard area for 5 return periods of rainfall including 7 related factors and RMR factor.....	113
51	The landslide potential and the range of total score considering SMR factor for all rainfall return period.....	116
52	Area of failure cut slope classes considered by including 7 related factors and SMR factor	118
53	Predicted failure cut slope hazard area for 5 return periods of rainfall including 7 related factors and SMR factor.....	121
54	Variable means between failure and non-failure of cut slope.....	124
55	Result of linear regression analysis for cumulative rainfall intensity 3 days (RMR factors included)	124
56	Results of enter logistic procedure.....	125
57	Result of linear regression analysis for cumulative rainfall intensity 3 day 100 years return period (RMR factors included)..	125
58	Results of enter logistic procedure.....	126
59	Parameter means and distribution of predictive failure of cut slope (RMR included).....	129
60	Variable means between failure and non-failure of cut slope.....	131
61	Result of linear regression analysis for cumulative rainfall intensity 3 days (SMR factors included).....	131
62	Results of enter logistic procedure.....	132
63	Result of linear regression analysis for cumulative rainfall intensity 3 days 100 years return period (SMR factors included)	132
64	Results of enter logistic procedure.....	133

LIST OF TABLES (Continued)

Table		Page
65	Parameter means and distribution of predictive failure of cut slope (SMR included)	136
 Appendix Table		
1	Slope characteristics obtained from field investigation	147
2	Slope characteristics obtained from field investigation for evaluated RMR and SMR	154
3	Conclusion of result USCS, Atterberg's limits, sieve analysis, and direct shear test, Phuket.....	168
4	Consistency index of soil following rock type	169
5	Data failure slope condition for regression analysis	170
6	Data non-failure slope condition for regression analysis.....	171

LIST OF FIGURES

Figure		Page
1	Landslide type	4
2	The main features of a rotational slide.....	5
3	Slope height, H, vs slope height factor, x	25
4	Topographic map of Phuket province.....	33
5	Flow diagrams showing all the methodologies.....	35
6	Rock mass rating (RMR) descriptions for field survey sheet (ISRM, 1981)	38
7	Evaluation sensitive areas for cut slope process	40
8	Geology (Rock type).....	44
9	Geology (Lineament zone)	45
10	Landform (Slope).....	46
11	Landform (Elevation).....	47
12	Surface drainage.....	48
13	Land use and land cover	49
14	Soil characteristics	50
15	Rainfall intensity	51
16	Engineering soil properties	52
17	GIS layers of considered factors	63
18	Landslide susceptibility map by weighting factor method considered 7 related factors	64
19	Predicted landslide susceptibility area considering 7 related factors	65
20	Landslide hazard map considering 1 year return period of rainfall	66
21	Landslide hazard map considering 5 years return period of rainfall	67
22	Landslide hazard map considering 20 years return period of rainfall	68
23	Landslide hazard map considering 50 years return period of rainfall	69
24	Landslide hazard map considering 100 years return period of rainfall	70
25	Landslide hazard map in Phuket using 1, 5, 20, 50 and 100 years return period of rainfall considering 7 related factors	71
26	Predicted landslide hazard area for 5 return periods of rainfall considering 7 related factors	72
27	Location of field investigation	74
28	Station PK32	75
29	Station PK85	76
30	Station PK38	76
31	Station PK39	77
32	Station PK40	77
33	Station PK20	78
34	Station PK09	78
35	Station PK35	79
36	Watershed and surface water resources in Phuket.....	81

LIST OF FIGURES (Continued)

Figure		Page
37	Field survey locations, cut slope condition.....	82
38	Graph relationships between cut slope failures and RMR rating .	84
39	Graph relationships between cut slope non failures and RMR rating	84
40	Normal distribution curve RMR value classified by slope condition	85
41	Cumulative frequency of RMR value classified by slope condition	85
42	Landslide potential classified by RMR value	86
43	Landslide susceptibility map by considering 7 related factors and RMR factor.....	88
44	Area of landslide classes considered by including 7 related factors and RMR factor.....	89
45	Comparison between the landslide susceptibility map by considering 7 related factors and considered by including 7 related factors and RMR factor	90
46	Comparison of landslide classes between considered by 7 related factors and considered by including 7 related factors and RMR factor.....	90
47	The landslide hazard map in Phuket shown by rainfall intensity return period of 1, 5, 20, 50 and 100 years respectively (RMR factor included)	91
48	The landslide hazard map in Phuket by rainfall intensity return period of 1, 5, 20, 50 and 100 years respectively (RMR factor included)	92
49	Predicted landslide hazard area for 5 return periods of rainfall including 7 related factors and RMR factor.....	93
50	Comparison between the landslide hazard map by considering 7 related factors and considered by including 7 related factors and RMR factor.....	94
51	Comparison of landslide hazard between considered by 7 related factors and considered by including 7 related factors and RMR factor	94
52	Graph relationships between cut slope failures and SMR rating ..	96
53	Graph relationships between cut slope non failures and SMR rating	96
54	Normal distribution curve SMR value classified by slope condition	97
55	Cumulative frequency of SMR value classified by slope condition	97
56	Landslide potential classified by SMR value.....	98
57	Landslide susceptibility map by considering 7 related factors and SMR factor	100

LIST OF FIGURES (Continued)

Figure		Page
58	Area of landslide classes considered by including 7 related factors and SMR factor	101
59	Comparison between the landslide susceptibility map	102
60	Comparison of landslide classes	102
61	The landslide hazard map in Phuket shown by rainfall intensity return period of 1, 5, 20, 50 and 100 years respectively (SMR factor included)	103
62	The landslide hazard map in Phuket by rainfall intensity return period of 1, 5, 20,50 and 100 years respectively (SMR factor included)	104
63	Predicted landslide hazard area for 5 return periods of rainfall including 7 related factors and RMR factor.....	105
64	Comparison between the landslide hazard map.....	106
65	Comparison of landslide hazard.....	106
66	Graph relationships between failure of cut slope and RMR factor	107
67	Graph relationships between failure of cut slope and RMR factor	107
68	Normal distribution of total score (7 related factors and RMR factor) classified by slope condition	108
69	Cumulative frequency of total score (7 related factors and RMR factor) classified by slope condition	108
70	Cut slope failure potential classified by 7 related factors and RMR factor	109
71	Area of failure cut slope classes considered by including 7 related factors and RMR factor.....	110
72	Area of failure cut slope classes considered by including 7 related factors and RMR factor.....	111
73	The failure cut slope of hazard map in Phuket showing rainfall intensity return period of 1, 5, 20, 50 and 100 years respectively (RMR factor included).....	112
74	Predicted failure cut slope hazard area for 5 return periods of rainfall including 7 related factors and RMR factor	113
75	Graph relationships between cut slope failures and SMR factor..	114
76	Graph relationships between cut slope non failures and SMR factor.....	114
77	Normal distribution of total score (7 related factors and SMR factor) classified by slope condition	115
78	Cumulative frequency of total score (7 related factors and SMR factor) classified by slope condition.....	115
79	Cut slope failure potential classified by 7 related factors and SMR factor.....	116
80	Area of failure cut slope classes considered by including 7 related factors and SMR factor	117

LIST OF FIGURES (Continued)

Figure		Page
81	Area of failure cut slope classes considered by including 7 related factors and SMR factor	118
82	Comparing between the failure cut slope hazard map	119
83	Comparison of failure cut slope hazard classes	119
84	The failure cut slope of hazard map in Phuket showing rainfall intensity return period of 1, 5, 20, 50 and 100 years respectively (SMR factor Include)	120
85	Predicted failure cut slope hazard area for 5 return periods of rainfall including 7 related factors and SMR factor.....	121
86	Comparison of landslide hazard.....	122
87	Probability of failure of sensitive area for cut slope for 1 year rainfall return period (RMR factor included).....	127
88	Probability of failure of sensitive area for cut slope for 100 years rainfall return period (RMR factor included).....	128
89	Probability of failure of sensitive area for cut slope for 1 year rainfall return period (SMR factor included)	134
90	Probability of failure of sensitive area for cut slope for 100 years rainfall return period (SMR factor included)	135
91	Recommendation of landslide sensitive area for cut slope by weighting factor analysis	138
92	Recommendation of landslide sensitive areas for cut slope by logistic regression analysis	139

Appendix Figure

1	Raingage station	162
2	Cumulative rainfall intensity 3 days contour return period 1 years	163
3	Cumulative rainfall intensity 3 days contour return period 5 years	164
4	Cumulative rainfall intensity 3 days contour return period 20 years	165
5	Cumulative rainfall intensity 3 days contour return period 50 years	166
6	Cumulative rainfall intensity 3 days contour return period 100 years	167
