TABLE OF CONTENTS	i
LIST OF TABLES	ii
LIST OF FIGURES	iii
LIST OF ABBREVIATIONS	v
INTRODUCTION	1
OBJECTIVES	3
LITERATURE REVIEW	4
MATERIALS AND METHODS	30
Materials	30
Chemicals	30
Analytical instrument	31
Methods	32
RESULTS AND DISCUSSION	35
CONCLUSION	51
LITERATURE CITED	53
APPENDICES	57
Appendix A RAW DATA	58
Appendix B SAMPLE CALCULATIONS	63
Appendix C CHROMATOGRAM OF ANACARDIC ACID	65

LIST OF TABLES

Table	Page
1 Fatty Acid Composition of Cashew Kernels	6
2 Food value per 100 g of fresh cashew apple	8
3 International Standard (IS) specification for CNSL	11
4 Common extraction solvents	25
5 Common drying agents for organic solutions	29

Appendix Table

A1 Anacardic acid from extraction by n-hexane	59
A2 Anacardic acid from extraction by methanol	60
A3 Anacardic acid from extraction by ethanol	61
A4 Amount of calcium anacardate obtained after acid-base reaction by various ethanol concentration solvent	62

LIST OF FIGURES

Figure	Page
1 Cashew tree	4
2 Cashew apple and cashew nut	5
3 Cross-section of a Cashew Fruit	5
4 Cashew kernel	6
5 Chemical structures of major compounds in natural CNSL	9
6 Decarboxylation of Anacardic acid	10
7 Application of CNSL	12
8 Method for extraction of CNSL from cashew nut shell method	13
9 HPLC of anacardic acid fraction, and solvent-extracted CNSL	19
10 Flow diagram for separation of anacardic acid, cardol, and cardanol from CNSL	20
11 HPLC profiles of CNSL	21
12 Soxhlet extractor	27
13 High-performance liquid chromatography instrument	31
14 The solutions after completing acid-base reaction	36
15 The solution after completing acid-base reaction by using sodium hydroxide as a base	37
16 Dried calcium anacardate	37
17 Structure of anacardic acid	38
18 Isolation of Anacardic acid from calcium anacardate	39
19 Chromatogram of anacardic acid produced from calcium anacardate by using ethanol as a solvent (HCl as acid)	40
20 Isolation of Anacardic acid by using sulfuric acid	41
21 Chromatogram of anacardic acid produced from calcium anacardate by using ethanol as a solvent (H ₂ SO ₄ as acid)	42
22 Chromatogram of CNSL dissolved in ethanol at 60 minutes	43
23 Equilibrium time for solvent extraction	44
24 Effect of solvent-to-CNS ratio on extraction of anacardic acid at 30°C	45
25 Effect of solvent-to-CNS ratio on extraction of anacardic acid at 50°C	46

LIST OF FIGURES (Continued)

Figure	Page
26 Effect of type on extraction performance	47
27 Effect of ethanol concentration on extraction performance	48
28 Chromatogram of CNSL after heated above 200°C for 30 min	49
29 Process flow diagram for separation of anacardic acid	50

Appendix Figure

C1 Chromatogram of CNSL dissolved in n-Hexane for 60 minutes	66
C2 Chromatogram of anacardic acid produced from calcium anacardate by using n-Hexane as a solvent	66
C3 Chromatogram of CNSL dissolved in methanol for 60 minutes	67
C4 Chromatogram of anacardic acid produced from calcium anacardate by using methanol as a solvent	67
C5 Chromatogram of CNSL dissolved in ethanol for 60 minutes	68
C6 Chromatogram of anacardic acid produced from calcium anacardate by using ethanol as a solvent (HCl as acid)	68
C7 Chromatogram of anacardic acid produced from calcium anacardate by using ethanol as a solvent (H ₂ SO ₄ as acid)	69
C8 Chromatogram of CNSL after heated above 200°C for 30 min	69

LIST OF ABBREVIATIONS

CNS	=	Cashew nut shell
CNSL	=	Cashew nut shell liquid
°C	=	Degree celsius
g	=	Gram
h	=	Hour
HCl	=	Hydrochloric acid
HPLC	=	High performance liquid chromatography
in	=	Inch
mg	=	Milligram
ml	=	Milliter
NIS	=	Nut in shell
Rpm	=	Revolutions per minute
