RESULTS AND DISCUSSION	43
Minerals in clay fractions of Alfisols and Ultisols in Thailand	43
Alfisols	43
Ultisols	49
Kaolin minerals	56
General properties of Thai Ultisols	56
Properties of the soil kaolins	58
Geochemistry of Thai Alfisols and Ultisols	70
Physical properties	70
Chemical Properties	71
Concentration of elements in Alfisols	73
Concentration of elements in Ultisols	75
Relationship between soil properties and elements concentrations	76
Principal component analysis	78
CONCLUSION	82
LITERATURE CITED	85
APPENDIX	107

## LIST OF TABLES

<b>Table</b>		<b>Page</b>
1	Classification of principle clay minerals	5
2	Cation exchange capacity (CEC), anion exchange capacity (AEC) and specific surface area (SSA) of clay minerals	11
3	Microcations sorption properties of some clay minerals	23
4	Classification of Alfisols in Thailand	28
5	Classification of Ultisols in Thailand	30
6	Minerals in the clay fraction and some soil properties of Alfisols	45
7	Minerals in the clay fraction and some soil properties of Ultisols	51
8	Locations, soil parent materials and some soil properties of samples from selected Thai Ultisols for kaolin study	57
9	Properties of the soil kaolins	59
10	Distribution of various crystal forms and particle dimensions of soil kaolin crystals determined by TEM	63
11	The major element composition of kaolin concentrates from 9 Thai Ultisols (ignited, exchangeable cation free basis)	66
12	Trace element concentrations in soil and kaolin concentrates of the 9 Ultisols and their percentage retention (ret.) by the kaolin concentrates	69
13	The mean values of some properties of Thai Alfisols and Ultisols	72
14	The median values of concentrations of elements in topsoil and subsoil samples of Thai Alfisols and Ultisols compared with concentrations in worldwide soils (topsoil) and critical concentrations for contaminated soils	74

## LIST OF TABLES (continued)

<b>Table</b>		<b>Page</b>
15	The correlation coefficients (r) of elemental content (major and trace elements) with soil properties of Thai Alfisols and Ultisols	77
16	The elemental correlation coefficients of four major elements with some trace elements of Thai Alfisols and Ultisols (topsoil)	77
<b>Appendix Table</b>		
1	Series, parent materials, taxonomic classes and distribution of Thai Alfisols	108
2	Series, parent materials, taxonomic classes and distribution of Thai Ultisols	110
3	Minerals in clay fraction of Thai Alfisols	114
4	Minerals in clay fraction of Thai Ultisols	116
5	Some physical properties of Thai Alfisols	120
6	Some physical properties of Thai Ultisols	122
7	Chemical properties of Thai Alfisols	126
8	Chemical properties of Thai Ultisols	130
9	Major and trace elements (XRF) of Thai Alfisols	138
10	Major and trace elements (XRF) of Thai Ultisols	142
11	Trace element concentrations in Thai Alfisols	150
12	Trace element concentrations in Thai Ultisols	154
13	Soil property interpretation of Thailand	162
14	X-ray diffraction spacings for the (001) reflections of layer-silicate species as related to sample treatment	165

## LIST OF FIGURES

<b>Figure</b>		<b>Page</b>
1	Geological map of Thailand showing the three main geological and soil sampling sites	32
2	Distribution of Ultisols and Alfisols in Thailand and soil sampling locations	33
3	XRD patterns of the basally oriented clay fraction on representative Alfisols. The clay consists much of kaolin (Kao) and illite (Ill) but also has a small amount of smectite (Sme)	44
4	Transmission electron micrographs (TEM) of Alfisols illustrating the dominantly sub-micron, platy, euhedral to subhedral morphologies and the wide variation of crystal morphology and size	44
5	Frequency distribution of the abundance of clay mineral species in the clay fraction of 30 samples of Thai Alfisols; (a) kaolin, (b) illite, (c) smectite, (d) quartz, (e) anatase and (f) iron oxide minerals (Goe=goethite and Hem=hematite)	46
6	XRD patterns of the basally oriented clay fraction of Klaeng (Kl) series (Typic Plinthaquults; Very-fine, kaolinitic) after various pre-treatments. The clay consists much kaolin (Kao) and has small amount of inhibited vermiculite (HIV)	50
7	Frequency distribution of the abundance of clay mineral species in the clay fraction of 75 samples of Thai Ultisols; (a) kaolin, (b) illite, (c) smectite, (d) quartz, (e) anatase and (f) iron oxide minerals (Goe=goethite and Hem=hematite)	53
8	Relationships between crystal size (CSD) and other properties of the soil (a) d-value of 001 and (b) d-value of 002 reflection	60
9	Transmission electron micrographs (TEM) of the soil kaolins illustrating the dominantly sub-micron, platy, euhedral to subhedral morphologies and the wide variation of crystal morphology and size within a single kaolin concentrate	62
10	Relationships between the reciprocal of mean crystal size (length) determined by electron microscopy and SSA and CEC	65
11	Relationships between crystal size (CSD) and other properties of the soil kaolins (a) % Fe <sub>2</sub> O <sub>3</sub> and (b) CEC	68

**LIST OF FIGURES (continued)**

<b>Figure</b>		<b>Page</b>
12	The textural triangle for topsoil and subsoil samples of Thai Alfisols and Ultisols	71
13	Factor analysis for chemical composition in whole soils of Thai Alfisols: (a) distribution of elements and soil properties, some points have been slightly displaced for clarity (topsoil); (b) distribution of soil samples (topsoil), (c) distribution of elements and soil properties, some points have been slightly displaced for clarity (subsoil); (d) distribution of soil samples (subsoil)	80
14	Factor analysis for chemical composition in whole soils of Thai Ultisols: (a) distribution of elements and soil properties, some points have been slightly displaced for clarity (topsoil); (b) distribution of soil samples (topsoil), (c) distribution of elements and soil properties, some points have been slightly displaced for clarity (subsoil); (d) distribution of soil samples (subsoil)	81
