

ACKNOWLEDGEMENTS

I would sincerely like to thank my mentor, Professor Dr. Peerasak Srinives, whose kindness and knowledge in plant breeding and molecular marker technique have invaluable help and accurate judgment of my work. Acknowledgements are extended to my committee members, Dr. Chawalit Hongprayoon and Dr. Witith Chai-arree. I appreciated for their advice.

This research is supported by the Center for Agricultural Biotechnology through the fund from Subproject Graduate Study and Research in Agricultural Biotechnology under the Higher Education Development Project, Commission on Higher Education, the Ministry of Education. Parts of this thesis were also supported by the Project on Breeding and Genetics of Field Legumes for Thailand, the Thailand Research Found, the National Center for Genetic Engineering at Biotechnology and the Graduate Research Fund of the Graduate School, Kasetsart University. I would like to thank Asian Vegetable Research and Development Center-The World Vegetable Center for providing seeds of mungbean germplasm. I would like to thank Miss Warunee Sommanus, Miss Chontira Sangsiri, Miss Utumpron Sompong, Miss Siriporn Chuayjaeng, Miss Siriporn Jangsutthivorawat and my friend for valuable suggestions, spirits and experience working in laboratory.

Special thanks and appreciation are extended to my family for their encouragement throughout the course of this research.
