INTRODUCTION	1
LITERATURE REVIEWS	3
MATERIALS AND METHODS	29
RESULTS AND DISCUSSION	45
CONCLUSION	166
LITERATURE CITED	168
APPENDIX	190

LIST OF TABLES

Table	Page
1 Potential uses of yeast in the foods, beverages and fermentation industries.....	4
2 Classification of the ascomycetous yeasts.....	5
3 Classification of the basidiomycetous yeasts.....	6
4 Distribution of mol% G+C among ascomycetous and basidiomycetous yeasts.....	12
5 Summary of commonly sequenced regions and their used ranges in yeast systematics.....	13
6 List of the primers used for amplification and/or sequencing of the rDNA regions most commonly used for yeast systematics.....	14
7 List of new yeast species found in Thailand.....	27
8 Carbon compounds used in the description of each species.....	39
9 Number of yeasts isolated from various habitats.....	46
10 Number of yeasts isolated from various regions of Thailand.....	47
11 Known species of ascomycetous and basidiomycetous yeasts isolated from some natural habitats of Thailand	48
12 List of known species found in this study.....	49
13 List of new species found in this study.....	58
14 List of not yet identified species found in this study.....	65
15 Nucleotide differences from nearest species of 283 strains of Thai yeasts.....	67
16 List of known species found from flowers collected in Thailand.....	70
17 List of known species found from insect frass collected in Thailand.....	71
18 List of known species found from mosses collected in Thailand.....	74
19 List of known species found from mushrooms collected in Thailand	75
20 List of known species found from leaves collected in Thailand.....	76
21 Taxonomic positions of new yeasts species found in this study.....	80

LIST OF TABLES (Continued)

Table	Page
22 Number of nucleotide differences in new species of genus <i>Sporidiobolus</i> found in this study	81
23 The nucleotide similarity in D1/D2 domain sequence of 26S rDNA of Thai strains and their closest species (Type strains).....	84
24 Similarity and Mol% G+C of DNA of <i>Hanseniaspora/Kloeckera</i> Group I and related strains	86
25 Number of nucleotide differences in D1/D2 domain among <i>Hanseniaspora/Kloeckera</i> Group I and type strains of related species.....	87
26 Similarity and Mol% G+C of DNA of Thai strains (Group II) and related strains of <i>Hanseniaspora</i>	88
27 Number of nucleotide differences in D1/D2 domain among <i>Hanseniaspora/Kloeckera</i> Group II and type strains of related species.....	89
28 Number of nucleotide differences in D1/D2 domain among <i>Hanseniaspora/Kloeckera</i> Group III and type strains of related species.....	92
29 Number of nucleotide differences in D1/D2 domain among <i>Hanseniaspora/Kloeckera</i> Group IV and Group V and type strains of related species.....	93
30 Similarity and Mol% G+C of DNA of Thai strains (Group II) and related strains of <i>Hanseniaspora</i>	94
31 DNA-DNA hybridization of strains related to <i>Candida friedrichii</i> ...	116
 Appendix Table	
A1 Vitamin requirement test.....	199
B1 Places where sample were collected.....	208
B2 Assimilation of carbon and nitrogen compounds of yeast strains assigned to new species.....	218

LIST OF TABLES (Continued)

Appendix Table	Page
B3 Fermentation and other characteristics of yeast strains assigned to new species.....	225

LIST OF FIGURES

Figure	Page
1 Structure of the ribosomal RNA gene cluster of yeasts.....	16
2 Places where samples were collected.....	29
3 Places where new species were found.....	47
4 The phylogenetic tree of the new species of ascomycetous yeasts and their closest species based on the D1/D2 domain sequences of 26S rDNA.....	78
5 The phylogenetic tree of the new species of basidiomycetous yeasts and their closest species based on the D1/D2 domain sequences of 26S rDNA.....	79
6 Cell morphology of <i>Hanseniaspora</i> sp. under scanning electron microscope.....	82
7 Phylogenetic tree showing the position of the strains of <i>Hanseniaspora/Kloeckera</i> isolated in Thailand and their related species based on the sequences of the D1/D2 domain of 26S rDNA..	83
8 Morphological characteristics of <i>Hanseniaspora thailandica</i>	97
9 Morphological characteristics of <i>Kloeckera siamensis</i>	98
10 Morphological characteristics of <i>Kloeckera songkhlaensis</i>	102
11 Morphological characteristics of <i>Kloeckera tradensis</i>	104
12 Thin layer chromatography of acid hydrolyzates of polysaccharides from <i>Hanseniaspora/Kloeckera</i>	106
13 The NMR spectra of H-1 region of the mannans of <i>Hanseniaspora</i> / <i>Kloeckera</i>	107
14 Phylogenetic tree showing the position of <i>Candida lignicola</i> based on the sequences of the D1/D2 domain of 26S rDNA	118
15 Morphological characteristics of <i>Candida lignicola</i>	110
16 Phylogenetic tree showing the positions of <i>Candida flosculi</i> based on the sequences of the D1/D2 domain of 26S rDNA.....	111
17 Morphological characteristics of <i>Candida flosculi</i>	114

LIST OF FIGURES (Continued)

Figure	Page
18 Phylogenetic tree showing the position of strains related to <i>Candida friedrichii</i> based on the sequences of the D1/D2 domain of 26S rDNA sequences.....	115
19 Morphological characteristics of <i>Candida jaroonii</i>	119
20 Morphological characteristics of <i>Candida koratica</i>	122
21 Morphological characteristics of <i>Candida songkhlaensis</i>	124
22 Morphological characteristics of strain <i>Candida</i> sp. (ST-311).....	126
23 Phylogenetic tree for two new species, <i>Candida kazuoi</i> and <i>Candida hasegawae</i> , constructed by the neighbor-joining method based on the D1/D2 domain of 26S rDNA sequences.....	128
24 Morphological characteristics of <i>Candida kazuoi</i>	130
25 Morphological characteristics of <i>Candida hasegawae</i>	133
26 Phylogenetic tree showing the position of <i>Candida thailandica</i> based on the sequences of the D1/D2 domain of 26S rDNA sequences.....	134
27 Morphological characteristics of <i>Candida thailandica</i>	137
28 Phylogenetic tree for <i>Candida easanensis</i> , <i>Candida nakhonratchasimensis</i> and <i>Candida pattaniensis</i> constructed by the neighbor-joining method based on the D1/D2 domain of 26S rDNA sequences.....	138
29 Morphological characteristics of <i>Candida nakhonratchasimensis</i>	141
30 Morphological characteristics of <i>Candida easanensis</i>	144
31 Morphological characteristics of <i>Candida pattaniensis</i>	147
32 Phylogenetic tree for a new species, <i>Candida udonthanina</i> , constructed by the neighbor-joining method based on the D1/D2 domain of 26S rDNA sequences.....	148
33 Morphological characteristics of <i>Candida udonthanina</i>	150
34 Phylogenetic tree for a new species, <i>Candida pattanina</i> , constructed by the neighbor-joining method based on the D1/D2 domain of 26S rDNA sequences.....	151

LIST OF FIGURES (Continued)

Figure	Page
35 Morphological characteristics of <i>Candida pattanina</i>	154
36 Phylogenetic tree for <i>Pichia koratensis</i> and <i>Pichia nongkratonensis</i> constructed by neighbor-joining method based on the D1/D2 domain of 26S rDNA sequences.....	156
37 Morphological characteristics of <i>Pichia koratensis</i>	159
38 Morphological characteristics of <i>Pichia nongkratonensis</i>	161
39 Phylogenetic tree for a new basidiomycetous yeast, <i>Trichosporon</i> <i>siamense</i> , constructed by neighbor-joining method based on the D1/D2domain of 26S rDNA sequences.....	162
40 Morphological characteristics of <i>Trichosporon siamense</i>	165
