

ACKNOWLEDGMENTS

First of all, I would like to thank and express my respect to my advisor, Assistant Professor Apinya Duangchan, for giving me not only a chance to work in her group, but also the permanent positive influences by her personal characteristics and enthusiastic working way. I am so sincerely grateful to my co-advisor, Dr. Pipat Pichestapong, for his advice and in valuable idea. I am very thankful to Associate Professor Paisan Kongkachuichay, and Dr. Monthon Thanuttamavong for their kindly giving the time to revise and approve my thesis.

I am also grateful to the administrative help received from the department of chemical engineering. A special thanks to Mr. Naphat Supakanapitak for his available hands and encouragements. I would like to extend my thanks to all my friends whose names are not mentioned here, for their care and help in so many ways. Your friendships are of the greatest importance to me.

Finally, I am deeply indebted to my parents and my lovely brother and sisters for giving me a nice family and always supporting me in everything I do.

Financial and material support from Rare Earth Research and Development Center, Office of Atoms for Peace , ADB project of the Department of Chemical Engineering and Graduate School, Kasetsart University is gratefully acknowledged.
