INTRODUCTION	1
OBJECTIVES	3
LITERATURE REVIEWS	4
IMF Product and Food Spoilage	4
Preservation of IMF foods	6
Essential oil	8
Gas chromatography system for analyzing	14
Active packaging (AP)	16
Plastic film and absorbent material use in AP systems	19
Modeling of microbial growth response	24
Product survey	24
Texture profile of cake	26
MATERIALS AND METHODS	27
Materials	27
Methods	30
Survey of types of IMF products in modern market from the retailers in Bangkok to identify products for preservation by active packaging	30
Study effectiveness of using cinnamon and clove oil as antifungal in IMF product by using active packaging technique	35
Developing the active packaging system for preservation of the selected IMF products with modified atmosphere conditions	43
Applying the active packaging technique developed to preserve the IMF products under normal air condition	54

RESULTS AND DISCUSSION	
Survey of types of IMF products in modern market from the retailers in Bangkok to identify products for preservation by active packaging	62
Study effectiveness of using cinnamon and clove oil as antifungal agents in IMF product by using active packaging technique	91
Developing the active packaging system for preservation of the selected IMF products with modified atmosphere conditions	109
Applying the active packaging technique developed to preserve the IMF products under normal air condition	157
CONCLUSION	190
RECOMMENDATION FOR FUTURE WORK	193
LITERATURE CITED	194
APPENDIX	209

LIST OF TABLES

Table		Page
1	Microorganisms of potential significance for IMF products	5
2	Basic properties of various polyethylene films	20
3	Locations used in this survey	31
4	Microorganism used in this test and their sources	37
5	Ingredients of trial fruitcakes	39
6	CRD designs and concentration of compound	46
7	Full factorial experimental designs for growth of <i>Aspergillus flavus</i>	52
8	The 3-level-4-factor response surface analysis for concentration of cinnamaldehyde in the dessicator headspace	57
9	IMF Product available in the modern markets in Bangkok in the year 2003	64
10	Pass-failed screening of IMF products	80
11	Comparison of potentiality of IMF products from product survey	90
12	Comparison of ingredients of premix fruitcakes and commercial fruitcakes	101
13	Comparison of colony colour, conidia of <i>Aspergillus</i> sp. found on premix cake, and commercial fruitcake, and <i>Aspergillus flavus</i> identified from the environment	105
14	Mean hedonic ratings of attributes of fruitcake at 300 µl and 700 µl by Western person and Thai person	109
15	Mean radial growth rate (mm/h) of <i>Aspergillus flavus</i> in MEA agar with different concentration of <i>p</i> -cymene, linalool, cinnamaldehyde, and eugenol	127
16	Microbial analysis of the premix fruitcake (PMC ₅)	129
17	Microbial analysis of the rice fruitcake (RF)	130

LIST OF TABLES (Continued)

Table		Page
18	Texture profile analysis of the premix fruitcake	136
19	Texture profile analysis of the rice fruitcake	137
20	Hedonic scores of premix fruitcake (PMC ₅) and rice fruitcake (RF)	139
21	ANOVA analysis for growth of <i>Aspergillus flavus</i> model	146
22	Variance analysis of the second-order regression model on growth rate of <i>Aspergillus flavus</i>	146
23	Estimated regression model of relationship between response variables (growth rate of <i>Aspergillus flavus</i>) and independent variables (x_1, x_2, x_3, x_4)	147
24	Predicted and experimental growth rate of <i>Aspergillus flavus</i>	151
25	Estimated regression model of relationship between response variables (concentration of cinnamaldehyde in the headspace) and independent variables (x_1, x_2, x_3, x_4)	162
26	ANOVA analysis for the concentration of cinnamaldehyde in the headspace	163
27	Variance analysis of the second-order regression model on concentration of cinnamaldehyde in the headspace	164
28	Predicted and experimental concentration at optimum conditions (700 ml jar)	171
29	Concentration of cinnamaldehyde in the headspace and at the surface of rice butter cake, total yeast and mould and total bacteria of the rice butter cake kept at 30 °C for a month.	174
30	Hedonic scores of the rice butter cake kept at 30 °C for a month	175
31	Concentration of cinnamaldehyde in the headspace and at the surface of rice butter cake, total yeast and mould and total bacteria of the	176

LIST OF TABLES (Continued)

Table		Page
32	Hedonic scores of the rice butter cake kept at room temperature for a month Texture profile analysis of the rice fruitcake	177
33	Predicted and experimental concentration of cinnamaldehyde in fruitcake	178

LIST OF FIGURES

Figure		Page
1	Varieties of 136 IMF products surveyed which were available in the modern market in Thailand	62
2	Days for initiation of colony growth under MAP conditions with cinnamon oil at 2,000 μ l: O ₂ (<0.05%-10%) and two CO ₂ (a) 20% or (b) 40%	92
3	Days for initiation of colony growth under MAP conditions with clove oil at 2,000 μ l: O ₂ (<0.05%-10%) and two CO ₂ (a) 20% or (b) 40%	93
4	Days for initiation of colony growth under MAP conditions with combination of clove and cinnamon oil at 2,000 μ l:O ₂ (<0.05%-10%) and two CO ₂ (a) 20% or (b) 40%	94
5	Days for initiation of colony growth with varying added volumes of mixtures of cinnamon and clove essential oils.	97
6	Growth curves of <i>Aspergillus flavus</i> incubated with 4,000 μ L of combinations of cinnamon oil and clove oil in various ratios	98
7	Comparison of water activity of fruitcake	99
8	Comparison of moisture content of fruitcake	100
9	Water activity of fruitcakes during storage	103
10	Moisture content of fruitcakes during storage	103
11	Growth of <i>Aspergillus flavus</i> on (a) commercial fruitcake (CMC ₂) and (b) Variety fruitcake mix (PMC ₅) with modified atmosphere condition	106
12	Growth of <i>Aspergillus flavus</i> on commercial fruitcake (a) and variety fruitcake mix (b) with normal air condition.	107
13	Evolution of <i>p</i> -cymene concentration in the headspace	111
14	Evolution of linalool concentration in the headspace	113
15	Evolution of cinnamaldehyde concentration in the headspace	115

LIST OF FIGURES (Continued)

Figure		Page
16	Evolution of eugenol concentration in the headspace	117
17	Evolution of <i>p</i> -cymene concentration in the fruitcake	119
18	Evolution of linalool concentration in the fruitcake	121
19	Evolution of cinnamaldehyde concentration in the fruitcake	123
20	Evolution of eugenol concentration in the fruitcake	125
21	Water activity of premix fruitcake (PMC ₅) at 20 °C, 68%RH and 30 °C, 75%RH	134
22	Water activity of rice fruitcake (RF) at 20 °C, 68%RH and 30 °C, 75%RH	135
23	Moisture content of premix fruitcake (PMC ₅) at 20 °C, 68%RH and 30 °C, 75%RH	135
24	Moisture content of rice fruitcake (RF) at 20 °C, 68%RH and 30 °C, 75%RH	136
25	pH of premix fruitcake (PMC ₅) at 20 °C, 68%RH and 30 °C, 75%RH	137
26	pH of rice fruitcake (RF) at 20 °C, 68%RH and 30 °C, 75%RH	137
27	Main compound of premix fruitcake extract	141
28	Main compound of premix rice extract	141
29	Growth of <i>Aspergillus flavus</i> on premix fruitcake incubated at temperature 20 °C and water activities at 0.80 (a) and 0.85 (b)	145
30	Growth of <i>Aspergillus flavus</i> on premix fruitcake incubated at temperature 25 °C and water activities at 0.80 (a) and 0.85 (b)	146
31	Growth of <i>Aspergillus flavus</i> on premix fruitcake incubated at temperature 30 °C and water activities at 0.80 (a) and 0.85 (b)	147
32	Growth of <i>Aspergillus flavus</i> on premix fruitcake incubated at temperature 37 °C and water activities at 0.80 (a) and 0.85 (b)	148

LIST OF FIGURES (Continued)

Figure		Page
33	Contour plot (a) and response surface plot (b) of growth rate of <i>Aspergillus flavus</i> on premix fruitcake by volume of oil (μl) and time (days) at 30 °C	153
34	Contour plot (a) and response surface plot (b) of growth rate of <i>Aspergillus flavus</i> on premix fruitcake by volume of oil (μl) and water activity (a_w) at 30 °C	154
35	Concentrations of <i>p</i> -cymene in headspace with various temperatures and times at 50 (a), 100 (b), 200 (c), and 300 (c) μl .	158
36	Concentrations of linalool in headspace with various temperatures and times at 50 μl (a), 100 μl (b), 200 μl (c), and 300 μl (d)	160
37	Concentrations of cinnamaldehyde in headspace with various temperatures and times at 50 μl (a), 100 μl (b), 200 μl (c), and 300 μl (d)	162
38	Concentrations of eugenol in headspace with various temperatures and times at 50 μl (a), 100 μl (b), 200 μl (c), and 300 μl (d)	164
39	Contour plot (a) and response surface (b) of cinnamaldehyde headspace concentration for the volume of oil (μl) and temperature (°C) at 800 ml volume of desiccators	170
40	Contour plot (a) and response surface (b) of cinnamaldehyde headspace concentration for the volume of oil (μl) and time (min) at 800 ml volume of desiccators	171
41	Contour plot (a) and response surface (b) of cinnamaldehyde headspace concentration for the volume of oil (μl) and temperature (°C) at 2,200 ml volume of desiccators	172

LIST OF FIGURES (Continued)

Figure	Page
42 Contour plot (a) and response surface (b) of cinnamaldehyde headspace concentration for the volume of oil (μ l) and time (min) at 2,200 ml volume of desiccators	173
43 Contour plot (a) and response surface (b) of cinnamaldehyde headspace concentration for the volume of oil (μ l) and temperature ($^{\circ}$ C) at 3,800 ml volume of desiccators	174
44 Contour plot (a) and response surface (b) of cinnamaldehyde headspace concentration for the volume of oil (μ l) and time (min) at 3,800 ml volume of desiccators	175
45 Temperature at the sensory laboratory, Walailak University in January 2006.	188
46 Relative humidity at the sensory laboratory, Walailak University in January 2006.	189
