In order to active the model of law to manage the water resource utilization for industry. This research aims to study the problems of utilization of water resources in industrial sector which this problem is arisen from a lack of appropriate water allocation.

The cause of water resources' scarcity and its quality problem which affects to the utilization of water resources for industries has come from the lack of laws for management and allocation of water resources. The existing laws are unclear in specifying the necessity of water resources utilization, having loophole in the law enforcement, lack of priority setting in water utilization, lack of organization which directly manage the water resources utilization and lack of imposing the value of water resources.

In order to resolve the problems on utilization of water resources for industries, the laws should systematize the water utilization, the ownership of water resources, the right to use water resources by private sector and the management of water resources by stipulation the measures to allocate water resources, granting the use of water resources and charging on the use of water resources. The organization which imposes the policy of water resources utilization for the whole country should be established including the organization which undertakes the administrative works and the local level. In addition, The public should have the right to participate in water resources management. The laws should maintain the concept of water resources conservation on sources of water resources and on environmental property of water. The proper enforcement of law should also be implemented.
