KINGKARN LERT-ANAN : ADAPTATION PROCESS OF AGRICULTURAL
COMMUNITIES IN WESTERN VICINITY OF BANGKOK : A CASE STUDY OF
BAN-PAEW DISTRICT , SAMUT SAKHON PROVINCE. THESIS ADVISOR :
ASSOC. PROF. KIAT CHIVAKUL, Ph.D. 136 pp. ISBN 974-333-098-4

As a district in the western vicinity of Bangkok , Ban-Paew has been influenced by the expansion of Bangkok Metropolis. The effect of this impact is on the agricultural land use and communities. So the aim of this study is to investigate the adaptation process of agricultural communities to seek resistant forces against the urban invasion. The results of these understandings would contribute the development plan for the district.

From the Study, Adaptation Process appears in social integration especially youth agriculture group movements that have resistant force against urban invasion by learning the appropriate marketing, agriculture and technology. By the way, there are other results of physical and social factors which have resistant forces against urban invasion. The strength of the youth agriculture group resulted by decision and progress productivity and agricultural land use, learning on marketing, agriculture and technology from members of group. The successful of the youth agriculture group movements shows the progress of productivity with efficiency and higher value products.

To serving a successful preservation of agricultural area in Ban-Paew district is therefore managable by increasing resistant forces and reducing urban invasion. Such an example of the youth agriculture group movements is a practical way suggested by this study to create resistant forces for agricultural land preservation around Bangkok Metropolis.
