

Labordé et al. (2001) found significant differences between the two groups of animals. Continental breeding (136 days) resulted in significantly higher birth weights than British breeding (131 days). Angus (Wagyu) cattle had significantly higher birth weights than Simmental cattle (Wagyu). Simmental cattle had significantly higher birth weights than Continental cattle (Wagyu). The birth weight of Simmental cattle was 56.9 kg compared to 52.5 kg for Continental cattle. The birth weight of British cattle was 94.8 kg compared to 91.9 kg for Continental cattle.
