

ACKNOWLEDGEMENTS

I would like to grateful thank to my thesis advisor, Assoc. Prof. Sutruedee Prathuangwong, for her valuable advice and suggestion, constant belief in my abilities and giving me the wonderful opportunity and for offering excellent working facilities, partially financial support for this work and manuscript preparation. Special thank Professor Gary Y. Yuen, my co-advisor for offering excellent working facilities, partially financial support for this work and giving me the possibility to continue the research of some data that I have collected at his laboratory in University of Nebraska-Lincoln, USA. I would also like to thank you for allowing me to freely explore this field and supporting me in such an expedition.

Also, I would like to sincerely thank to Prof. Amit Mitra and Assoc. Prof. Liangcheng Du, thanks for your kind cooperation, and the beautiful discussions we had. I would also like to express our gratitude to the Protein Core Facility and the Mass Spectrometry Core Facility of the Center for Biotechnology. To Christy Jochum, Cafer Eken, Hu Yin, graduate and undergraduate students of Prof. Gary's laboratory and Assoc. Prof. Sutruedee's laboratory, I sincerely thank all of them for their kind cooperation and friendship.

This research was financially supported by a grant from the Thailand Research Fund (TRF) for providing the Royal Golden Jubilee (RGJ-Ph.D program) Scholarship and thank to the Thai-US Fulbright Program to support Fulbright-TRF Thai Junior Research Scholarship Program for the Academic Year 2007.

Finally, this thesis is dedicated to the memory of my parents and family, who provide me endless for the most and best education as possible.
