

ACKNOWLEDGEMENT

This thesis is the end of my long journey in obtaining my degree in Doctor of Philosophy (Chemistry) in resulting of five and half years of work since I have been accompanied and supported by a number of people. It has few opportunities to publicly express my gratitude for the following faculty members, colleagues, friends and family.

I must begin by expression my deep gratitude to my advisor, Associate Professor Dr. Supa Hannongbua, for her valuable guidance, excellent support and kind encouragement throughout the course of my undergraduate and in particular graduate altogether close by a decade. Besides of being an excellent advisor, Assoc. Prof. Dr. Supa Hannongbua was close as a relative and a good friend to me. I have learned from her not only in aspect of scientific research but also many great things: positive thinking, good performance and kind attitude. I am deeply appreciated and special thanks to my co-advisor, Dr. Adrian J. Mulholland, who kept an eye on my progressive work and always provides me for valuable guidance, considerably helpful comments, discussion on various aspects to my research and especially for his kind hospitality during my short visits in Bristol. They both frequently help me to build my confidence and sustained faith in my ability more than I had by my own.

Furthermore, I would like to thank my committees, Associate Professor Dr. Supanna Techasakul and Associate Professor Dr. Charanai Panichajakul the representative of Graduate School, for their helpful criticisms and suggestions, and for the time spent reading my thesis and contributing to my examination.

Full financial support by The Royal Golden Jubilee Ph.D. program and supporting from the Postgraduate Education were gratefully acknowledged. The Postgraduate Education and Research Programs in Petroleum and Petrochemical Technology (ADB-MUA), Department of Chemistry, Kasetsart University, and the University of Bristol Computational Chemistry Centre are gratefully acknowledged for research facilities, software packages and computing time.

Special thanks are due to Dr. Suwipa Saen-oon for her valuable assistance, continuing supports in various ways and for advising me at each state of the Ph.D. program up to date although she now works as a postdoctoral researcher in U.S.A. Many thanks to Phornphimon

Maitarad in manner of her kind assistance and the time spent in my thesis process behind the scenes without ever receiving.

A great thanks goes to my office mates at Computational and Applied Chemistry (LCAC) at Kasetsart University in particular Dr. Potjaman Poolmee, Dr. Songwut Suramitr, Dr. Patchareenart Saparpakorn, Rungtiwa Chidthong, Pensri Srivub, Poonsiri Thipnate, Nareerat Kitisripanya, Witcha Treesuwan and Phornphimon Maitarad as well as those I did not mention by name for their friendship and all considerable helpful assistances during my study.

Here, all of my friends and my colleagues at Physical and Theoretical Chemistry, School of Chemistry at University of Bristol, Dr. Christine M. Bathelt, Dr. Jose Luis Carreon Macedo, Jolanta Zurek, Dr. Alessio Lodola and Dr. Kara E. Ranaghan are sincerely grateful for their supporting, helpful assistance, sharing useful ideas, and for their friendship and making me happy and laugh on a daily basis during my time in Bristol.

To my good friends Supawadee Namuangruk, Dr. Pipat Khongpracha, Dr. Somkiat Nokbin, Dr. Jakkapan Sirichareonsre, Nongnuch Artrith and Chompunuch Warakulwit: thank you very much for always cheering me up, supporting and keeping an eye on me in these last few years.

Finally, I would like to express my most profound gratitude to my mother, my brothers and my sister for their love, sincere care, constant support and great encouragement throughout the duration of my educations.
