Materials	29
Methods	29
RESULTS AND DISCUSSION	84
CONCLUSION AND RECOMMENDATION	100
Conclusion	100
Recommendation	102
LITERATURE CITED	105
APPENDIX	109
Appendix A	110
Appendix B	127

LIST OF TABLES

Table	Page
1 The classification of irrigation project	31
2 Rainfall and runoff level at the Chao Phraya river basin	31
3 The large irrigation projects in the Chao Phraya River Basin	33
4 The specific details for water control evaluation and management practices in irrigation	51
5 The pilot irrigation projects included in the RAP	52
6 Quantitative indicators were specified on water allocation assessment in large irrigation system	57
7 Qualitative indicators were specified on water allocation assessment in large irrigation system	58
8 The example of weighted score in different ETo and Rn	65
9 The conclusion of the relative important value of qualitative indicators	71
10 Weekly reference crop evapotranspiration of Phitsanulok by Penman-Montheith method (mm/day)	74
11 The 36 alternatives of water allocation plan of Plaichumpol O&M project	83
12 Status of water delivery service in the irrigation projects	85
13 The evaluations of project employees and water user associations	86
14 Water delivery service evaluation in the main canal	87
15 Water delivery service evaluation in secondary canals	89
16 Water delivery service evaluation in tertiary canals	89
17 An example of possible modernization activities for a large irrigation system	91
18 The comparisons between FAO and modified weighted factor	92
19 Optimal alternative of water allocation plan of Plaichumpol O&M project	94

LIST OF TABLES (continued)

Table	Page
20	Crop area distribution in different cropping patterns 95
21	The distributions income and crop area in different cropping pattern 96

Appendix Table

A1	The conclusion of Rapid Appraisal Process results of 12 pilot project in Chao Phraya river basin	111
B1	Gross irrigation water requirement at different deficit condition	128
B2	Relative yield and income of paddy at different irrigation application	128
B3	Relative yield and income of Maize at different irrigation application	129
B4	Relative yield and income of Soybean at different irrigation application	129
B5	Relative yield and income of Peanut at different irrigation application	130
B6	Relative yield and income of Sesame at different irrigation application	130
B7	Relative yield and income of Vegetable at different irrigation application	131
B8	Relative yield and income of Mungbean at different irrigation application	131
B9	Comparison of crop area and income for 1 mcm. irrigation water in wet year	132
B10	Comparison of crop area and income for 1 mcm. irrigation water in normal year	133
B11	Comparison of crop area and income for 1 mcm. irrigation water in dry year	134
B12	Weekly crop coefficient of different crops by Penman-Monteith Method	135
B13	Weight of rainfall for estimation of effective rainfall	136
B14	Gross irrigation water requirement of paddy in wet year	137
B15	Gross irrigation water requirement of paddy in normal year	138
B17	Dry season cropping in five phases for paddy in wet year (1 st week)	140
B18	Dry season cropping in five phases for paddy in wet year (2 nd week)	140

LIST OF TABLES (continued)

Table	Page
B19 Dry season cropping in five phases for paddy in wet year (3 rd week)	141
B20 Dry season cropping in five phases for paddy in wet year (4 th week)	141
B21 Dry season cropping in five phases for paddy in wet year (5 th week)	142
B22 Dry season cropping in five phases for paddy in normal year (1 st week)	142
B23 Dry season cropping in five phases for paddy in normal year (2 nd week)	143
B24 Dry season cropping in five phases for paddy in normal year (3 rd week)	143
B25 Dry season cropping in five phases for paddy in normal year (4 th week)	144
B26 Dry season cropping in five phases for paddy in normal year (5 th week)	144
B27 Dry season cropping in five phases for paddy in dry year (1 st week)	145
B28 Dry season cropping in five phases for paddy in dry year (2 nd week)	145
B29 Dry season cropping in five phases for paddy in dry year (3 rd week)	146
B30 Dry season cropping in five phases for paddy in dry year (4 th week)	146
B31 Dry season cropping in five phases for paddy in dry year (5 th week)	147
B32 Weekly different percentage of rainfall probability exceedence of fitted distribution	148
B33 Average weekly effective rainfall(mm/day) at different probability exceedence for paddy	149
B34 Average weekly effective rainfall(mm/day) at different probability exceedence for non-paddy	149

LIST OF FIGURES

Figure	Page
1 Schematic diagram of Analytic Hierarchy Process	26
2 Interaction matrix 3×3 for relative impact	26
3 Example of Irrigation Systems	29
4 Outline of the Chao Phraya River Basin	32
5 The Greater Chao Phraya Project	37
6 Pitsanulok Irrigation System	43
7 Plaichumpol, Dong Setthi and Tha Bua O&M project	44
8 The water distribution of Plaichumpol O&M project	45
9 Existing dry season cropping pattern of Plaichumpol O&M project	47
10 Existing dry season cropping pattern of Dong Setthi and Tha Bua O&M project	47
11 The pilot irrigation projects in the Chao Phraya river basin	53
12 Analytic Hierarchy Process for water allocation improvement in large irrigation system	56
13 The relative important value of sub indicators specified on water control in main canal	66
14 The relative important value of sub indicators specified on characteristics of main canal	67
15 The relative important value of sub indicators specified on Head Reg. and check structure in main canal	68
16 The relative important value of sub indicators specified on off-take (Head reg. from main canal to secondary canal)	69
17 The matrix of relative important value of qualitative indicators	70
18 Comparison of crop productivity in different cropping pattern	97
19 Comparison of crop area in different cropping pattern	97
20 Crop area comparison of proposed, planned and cultivated pattern	98
