KU-Alk4 176 28 Comparison of N-terminal amino acid sequences of Ganoderma sp. KU-Alk4 laccases and the other fungal laccases 178 29 Substrate specificity of laccase isozymes from Ganoderma sp. KU-Alk4 184 30 Rates of oxidation of various substrates catalyzed by KULac 1 and 3 from Ganoderma sp. KU-Alk4 185 31 Effect of various reagents and organic solvents on laccase isozymes from Ganoderma sp. KU-Alk4 188

#### **Appendix Table**

A1	Some chemical properties of the enzyme-treated pulp of	
	paper mulberry from the process of soaking the bark in the	
	lignin-degrading enzymes from KU-Alk4 for 12, 24, 36 and	
	48 h compared with that soaked in water	233

### LIST OF FIGURES

Figure

1	The enzyme mechanisms of laccase, MnP and LiP	9
2	Structure of lignin	26
3	Chemical structures of lignin-related compounds	27
4	Three-dimensional structure of the Coprinus cinereus laccase.	30
5	Two possible spectroscopically models for peroxide bridging	
	at the trinuclear cluster site	30
6	Catalytic cycle of laccase	31
7	Scheme of principal methods of enzyme immobilization	41
8	Ganoderma sp. KU-Alk4	54
9	A 5 L-airlift bioreactor used in Indigo Carmine decolorization by	
	copper alginate immobilized laccase of Ganoderma sp. KU-Alk4	74
10	Time course of the lignin-degrading enzymes production by	
	Ganoderma sp. KU-Alk4 in Kirk's medium, pH 7.0 and incubated in	
	the different conditions	82
11	Effect of pH on production of laccase and MnP by	
	Ganoderma sp. KU-Alk4 in Kirk's medium	85
12	Induction control of laccase production of Ganoderma sp. KU-Alk4	
	in Kirk's medium pH 8.0 by 0.85 mM veratryl alcohol	88
13	Effect of some phenolic compounds as inducer to the	
	laccase production of Ganoderma sp. KU-Alk4	
	cultivated in Kirk's medium pH 8.0	91
14	Effect of various carbon sources, each 1%, on laccase production of	
	Ganoderma sp. KU-Alk4 cultivated in Kirk's medium pH 8.0	94
15	Effect of glucose concentration on laccase production of	
	Ganoderma sp. KU-Alk4 in Kirk's medium pH 8.0	97
16	Catabolite repression control of lignin degrading enzymes production	
	by Ganoderma sp. KU-Alk4 in Kirk's medium pH 8.0	100

## Figure

17	Effect of copper ion on laccase production of	
	Ganoderma sp. KU-Alk4 cultivated in Kirk medium pH 8.0	102
18	Effect of manganese ion on laccase production of	
	Ganoderma sp. KU-Alk4 cultivated in Kirk medium pH 8.0.	104
19	Effect of shaking rate on laccase production Ganoderma sp.	
	KU-Alk 4 in Kirk medium pH 8.0	106
20	Cultivation of Ganoderma sp. KU-Alk4 on solid substrates	
	composed of agricultural products	109
21	(A) Commercial method for preparing inoculum of mushroom	
	in Thailand. (B) Cultivation of Ganoderma sp. KU-Alk4 on	
	solid substrates of corn, sweet sorghum or rice grain, respectively,	
	in 9 days at room temperature	110
22	Lignin-degrading enzymes from Ganoderma sp. KU-Alk4	
	cultivated on agricultural solid substrates	111
23	Induction control of production of MnP from Ganoderma sp.	
	KU-Alk4 cultivated on agricultural solid substrates.	113
24	Induction control of production of laccase from	
	Ganoderma sp. KU-Alk4 cultivated on agricultural solid substrates	114
25	Laccase activity and growth curve of Ganoderma sp. KU-Alk4	
	in non-optimized Kirk's liquid medium with 10 g/L glucose and	
	0.22 g/L ammonium atrtrate. Initial pH was 7.0 and no pH controlled	
	throughout the experiment	117
26	Laccase production by Ganoderma sp. KU-Alk4 at time	
	course of fermentation in the selected optimized media by	
	the Box-Behnken factorial designed	120

## Figure

vii

27	Graphical analysis of the relationship between carbon sources,	
	type and concentration and the laccase produced by Ganoderma sp.	
	KU-Alk4 at pH 4.0( $\circ$ ), 6.0( $\Box$ ) and 8.0( $\Delta$ )	124
28	Graphical analysis of the relationship between nitrogen type and	
	concentration and the laccase produced by Ganoderma sp.	
	strain KU-Alk4 at pH 4.0( $\circ$ ), 6.0( $\Box$ ) and 8.0( $\Delta$ )	125
29	Graphical analysis of the relationship between inducer (mM),	
	veratryl alcohol, guaiacol and ferulic acid (c) and	
	concentration and the laccase produced by Ganoderma sp.	
	KU-Alk4 at pH 4.0( $\circ$ ), 6.0( $\Box$ ) and 8.0( $\Delta$ )	126
30	Observation and prediction of laccase activity of	
	Ganoderma sp. KU-Alk4 calculated with the model	128
31	Confirmatory runs using the best medium: glycerol (40 g/L),	
	yeast extracts (0.22 g/L) and veratryl alcohol (0.85 mM) at pH 6.0	129
32	Optimum pH of crude laccase from Ganoderma sp. KU-Alk4	
	cultured in pH 8.0 Kirk's medium with 1% glucose (o),	
	4% glucose ( $\Box$ ) and pH stability at 1 h for crude enzyme of	
	1% glucose ( $\bullet$ ), 4% glucose ( $\blacksquare$ )	136
33	Optimum temperature of crude laccase from Ganoderma sp.	
	KU-Alk4 cultured in pH 8.0 Kirk's medium with 1% glucose (o),	
	4% glucose ( $\Box$ ) and temperature stability at 1 h for	
	crude enzyme of 1% glucose ( $\bullet$ ), 4% glucose ( $\blacksquare$ )	136
34	Decolorization of various dyes by the crude enzymes of	
	Ganoderma sp. KU-Alk4 cultivated in Kirk's medium with	
	1% (G1%) and 4% glucose (G4%)	139
