

The research aimed to examine and compare student activities advisor's and student committee's opinions towards student activities performance at Rajamangala Institute of Technology, Bangkok Technical Campus with expertise's criteria deriving from Sombut Kummuang's thesis. The philosophy, policy, objective, scope, type and characteristics, personnel management, budgeting and resource, organization, performance, and evaluation of student activities were ten aspects in the study. The subjects consisted of 49 student activities advisors and 99 student committees. Five rating scale questionnaires with 115 items were calculated and the statistics used for data analyzing were median and median test.

The major findings were as follows:

1. There was moderate level among the opinions of student activities advisors and student committee towards student activities performance at Rajamangala Institute of Technology, Bangkok Technical Campus, as a whole. However, there was low level in student activities advisors' opinions about evaluation and performance of the student activities, whereas there was high level in student committee's opinions about philosophy, policy, objective, scope and organization of the student activities.

2. It was found that student activities advisors' opinions and those of student committee as a whole and in each area, were significantly different at the level .01 and the median was below expertises' criteria.
