

CHAPTER VI

FUTURE WORK

The suggestions for further study of rice husk ash (RHA) and terra cotta bodies are as follows:

1. To study the effect of RHA incorporated with other bodies which are fired at higher temperature (more than 1100 °C).
2. To analyze the following variables in drying of terra cotta bodies,
 - (a) Temperature
 - (b) Humidity
 - (c) The amount of nonplastic or less plastic materials such as sand, grog, RHA, less plastic clays and etc.
